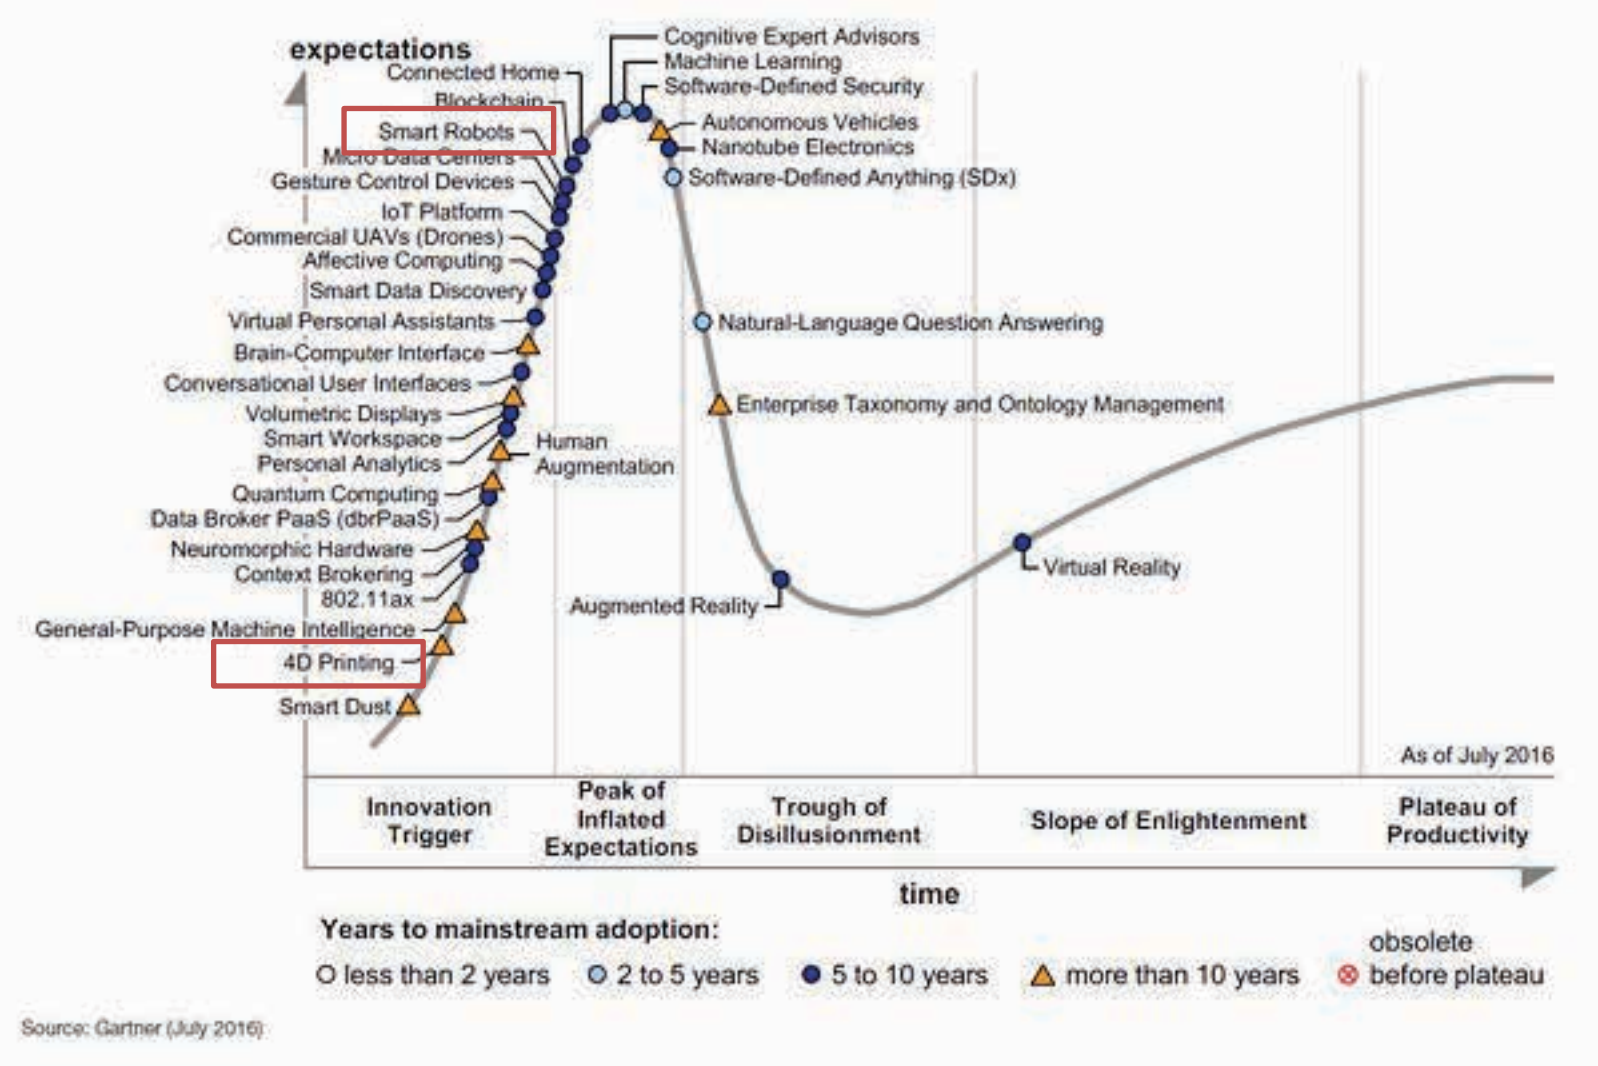
Emerging Technologies

3D Hype Cycle_2016



#Nuove sfide con i materiali per la stampa 3D.

.

Dalla Technoteca 4.0

#Grande e’ bello

Oltre il PLA....
... oltre il filamento.

#Fare
flessibile

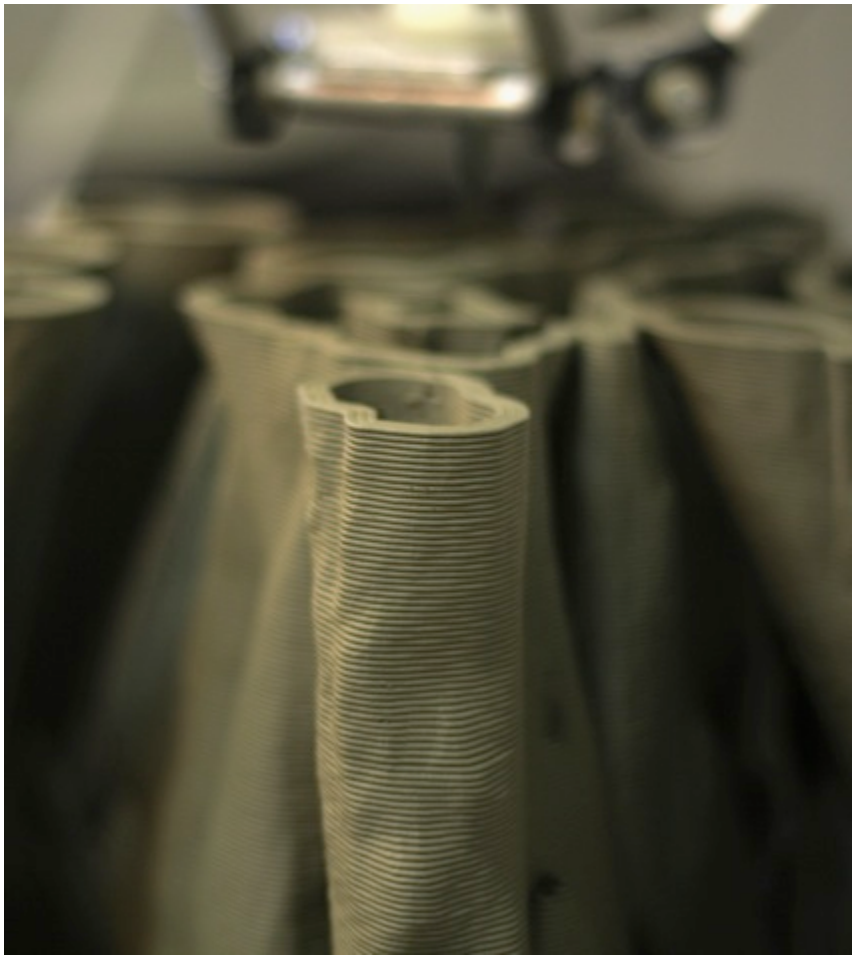
La gomma in 3D.

#finiture

Sotto la superficie… il suono.

#fare arte

Vecchi materiali.
Nuove tecnologie.



FILAMENTO caricato in carbonio….
… grafene, nanotubi, e oltre.

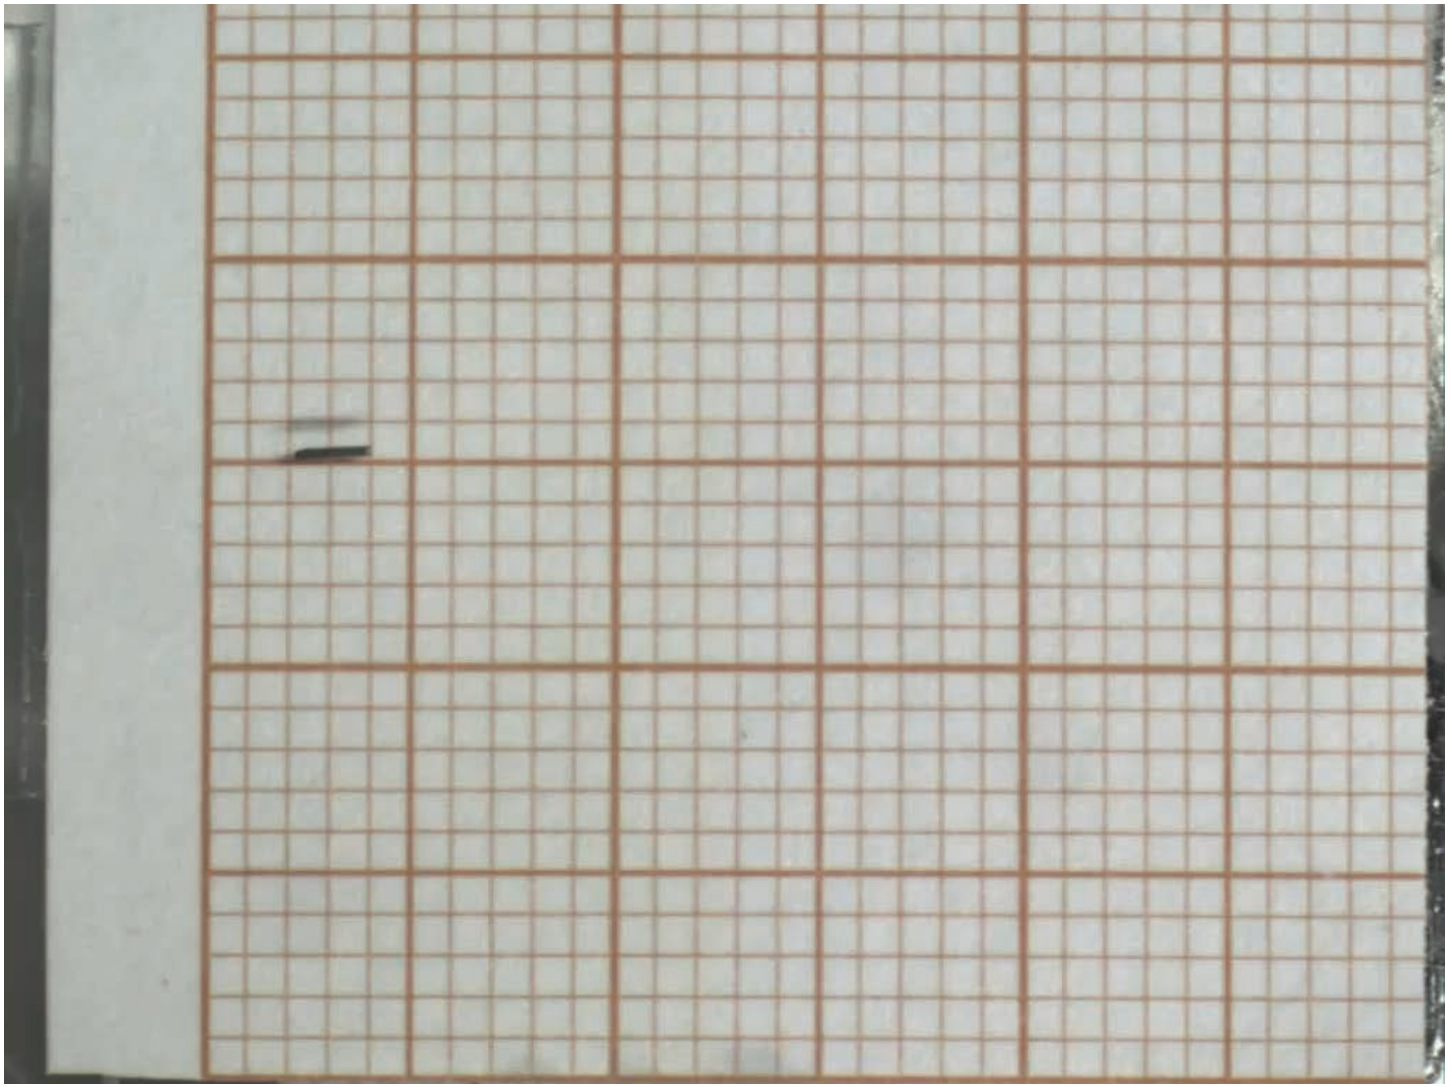
L’OPPORTUNITA’

+MATERIALI

I MATERIALI
nella STAMPA 3D
fanno tanto.
Forse ANCHE di Più.

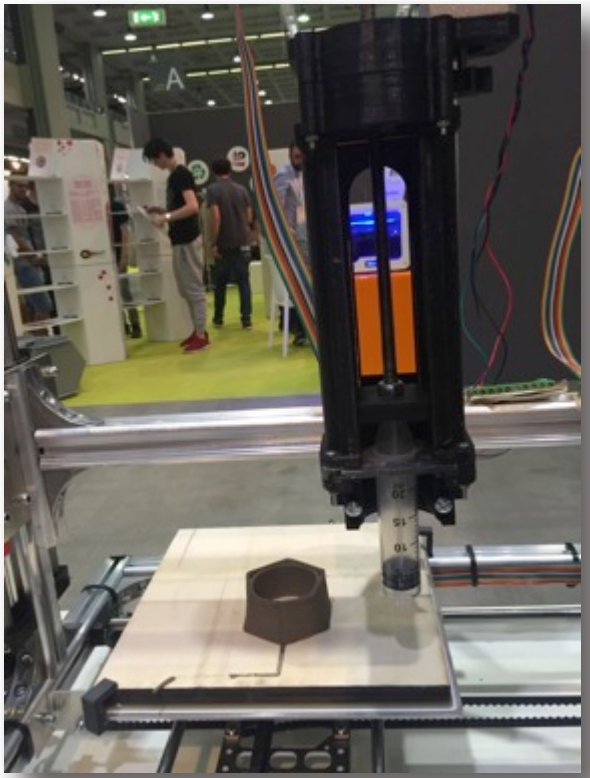
Fare molto piccolo….

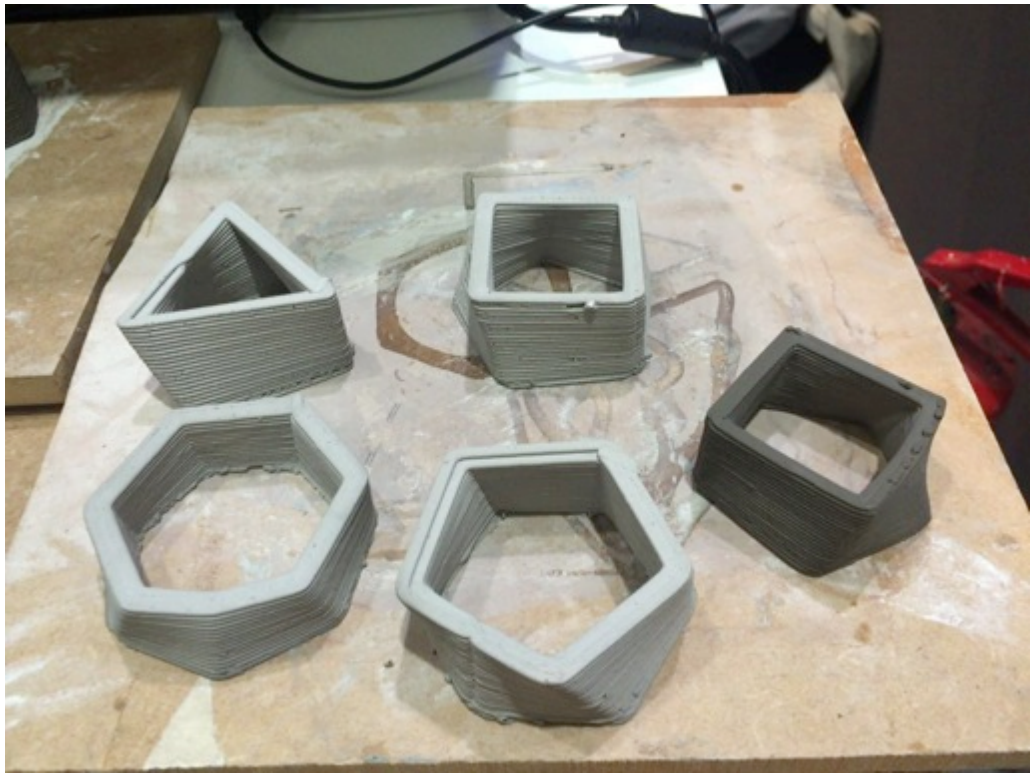
Resine magnetiche e….Microroborot



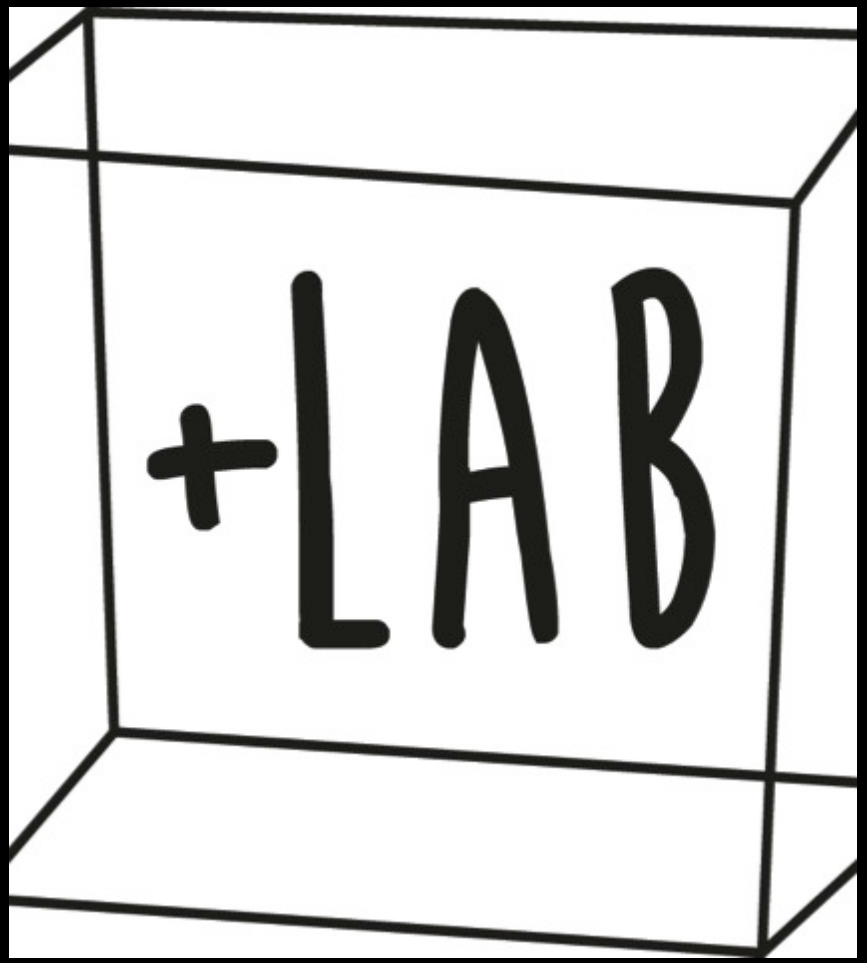
GEOPOLIMERI

Dal passato… al futuro.

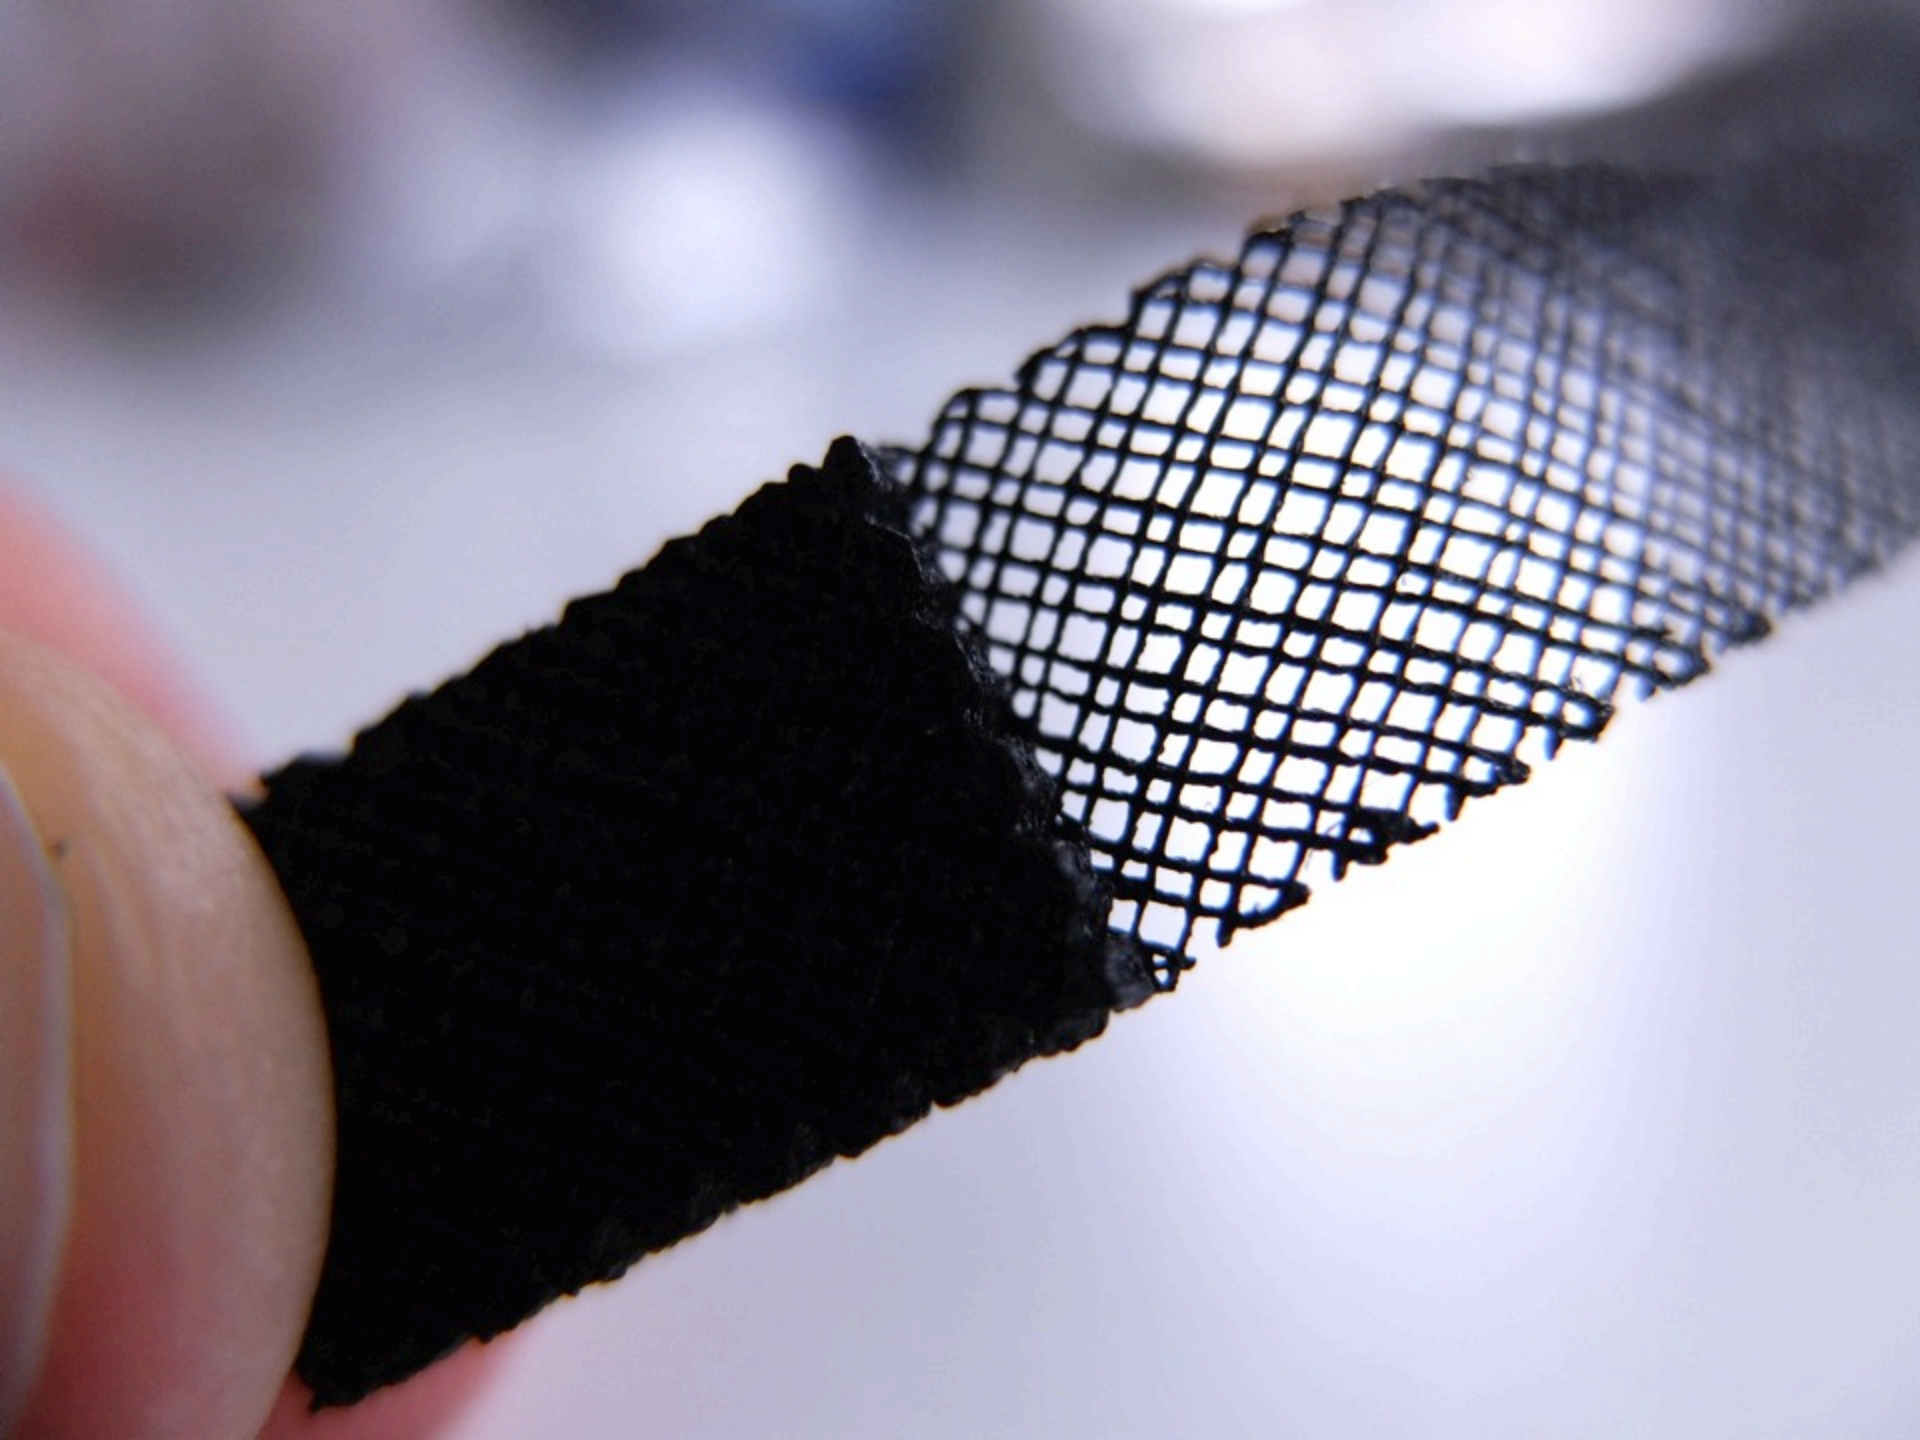




+COMPOSITI

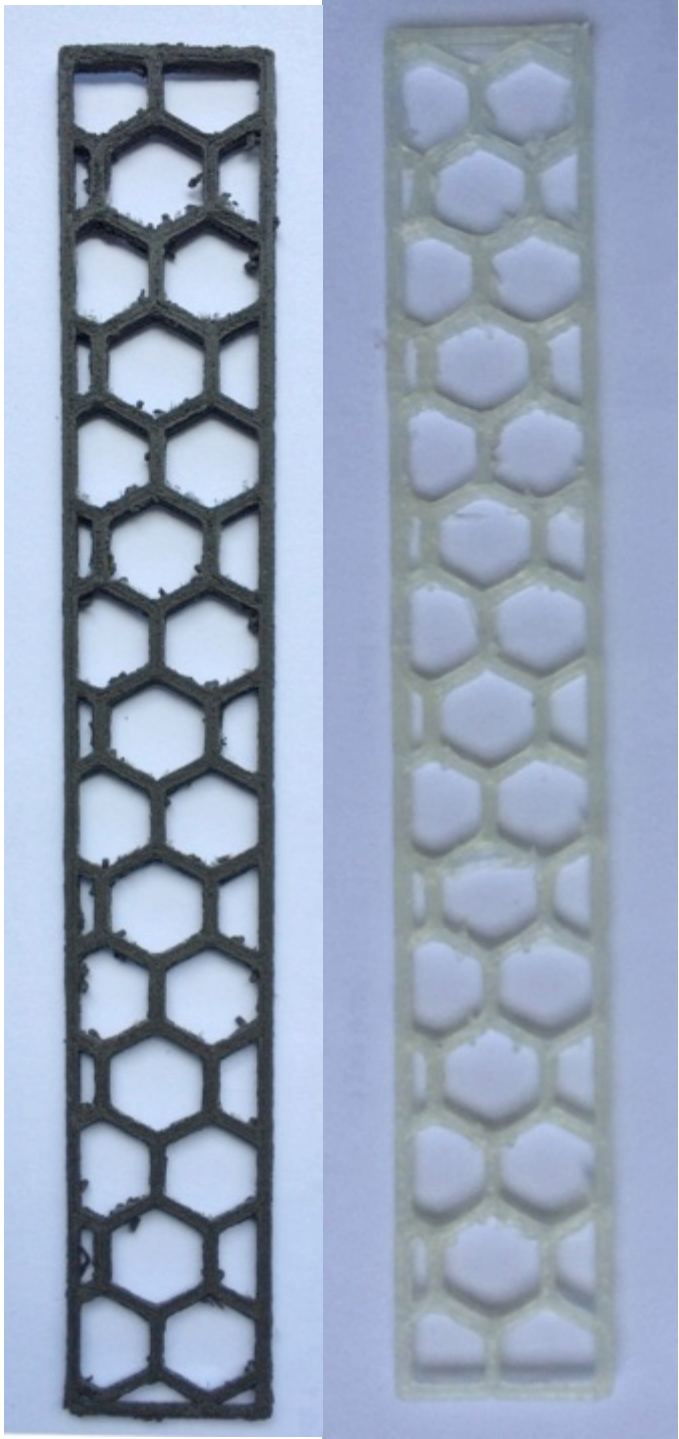


+LAB

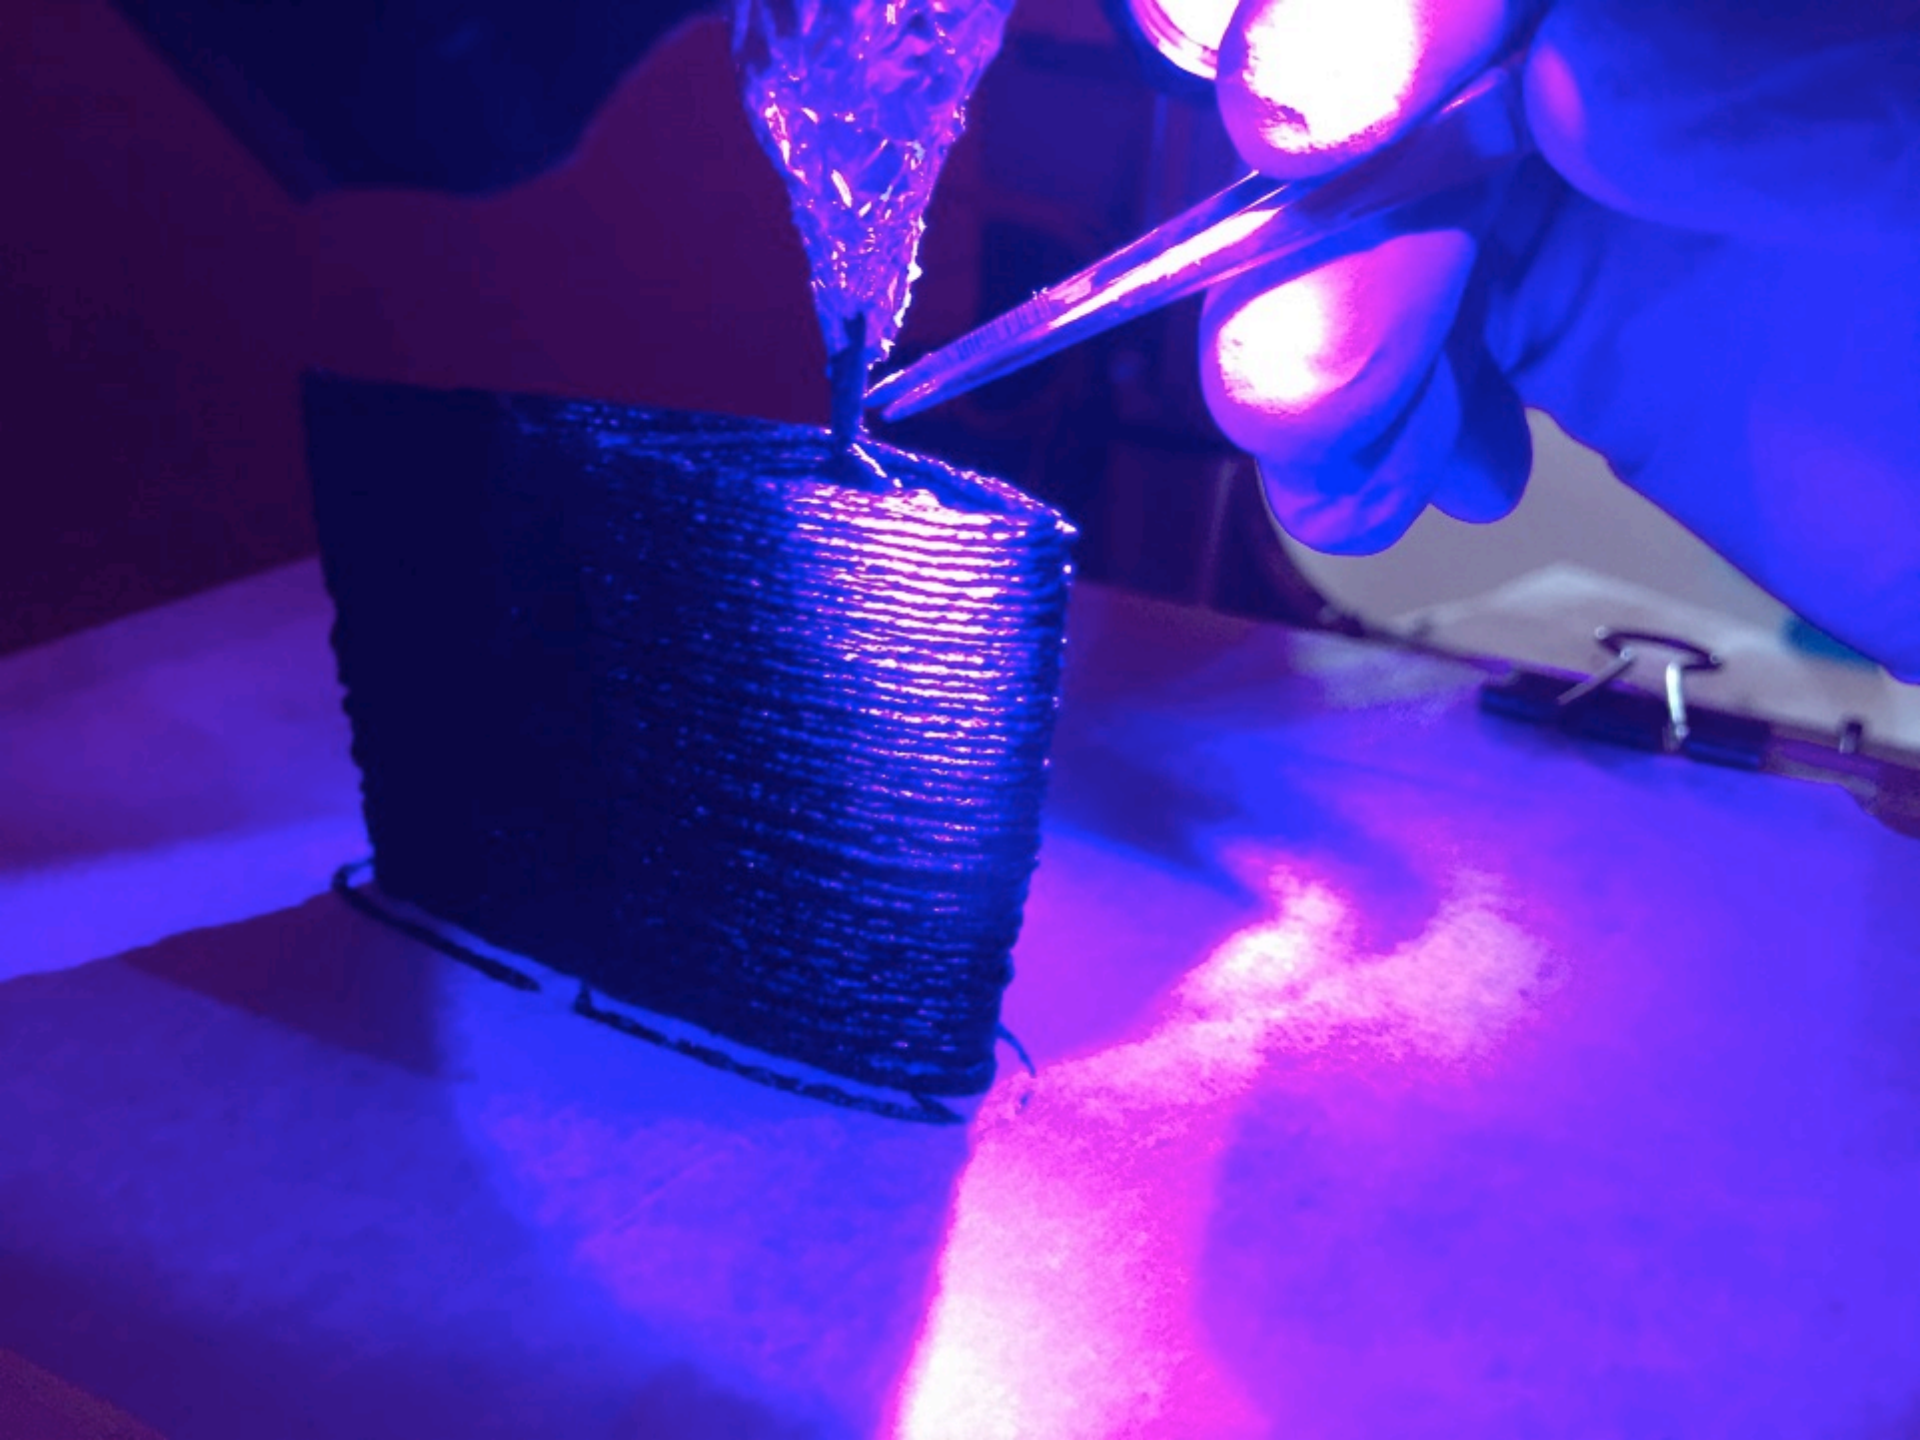


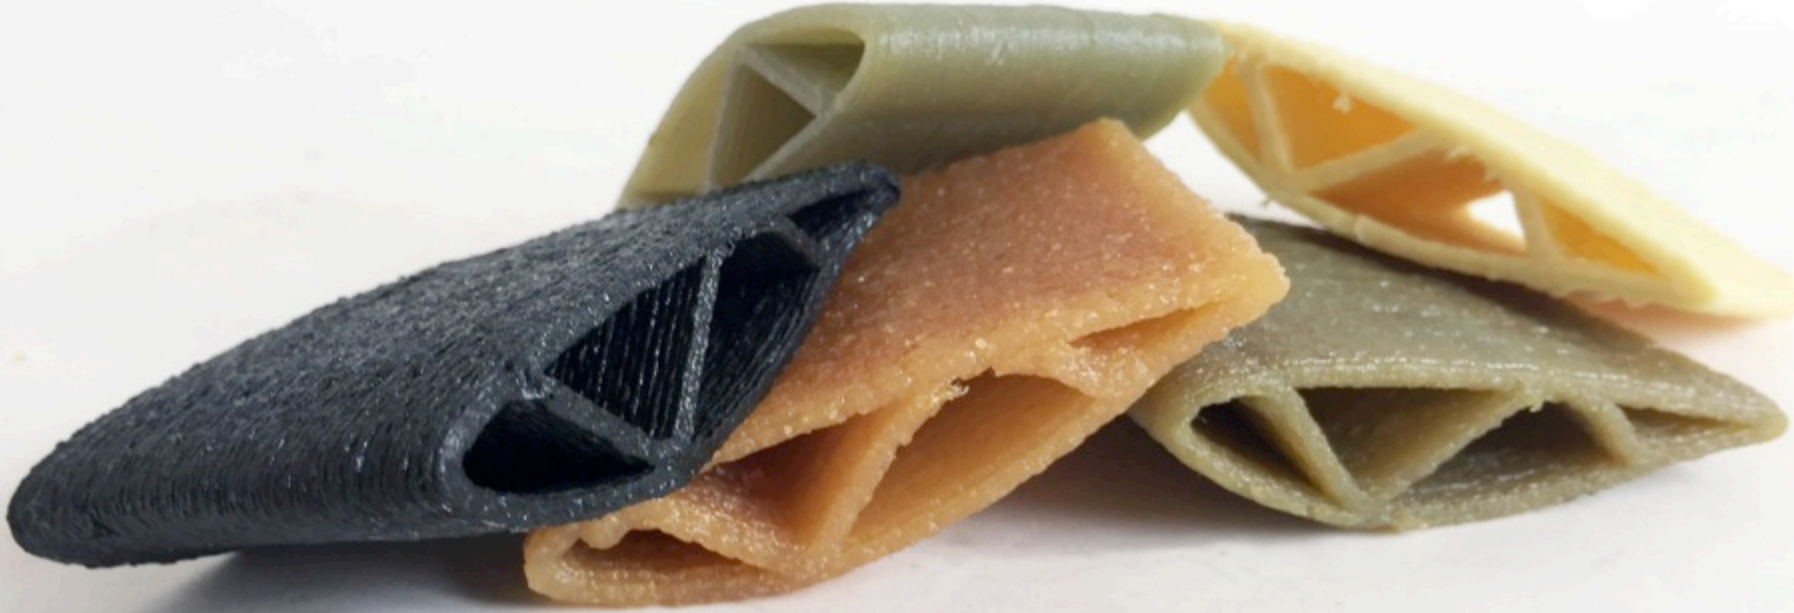
Resine epossidiche
foto e termopolimerizzabili

- Fibre corte di carbonio
- Fibre corte di vetro
- Lignina
- Particelle di Al
- Particelle di Fe
- Particelle di Ag
- FIBRE BIOBASED

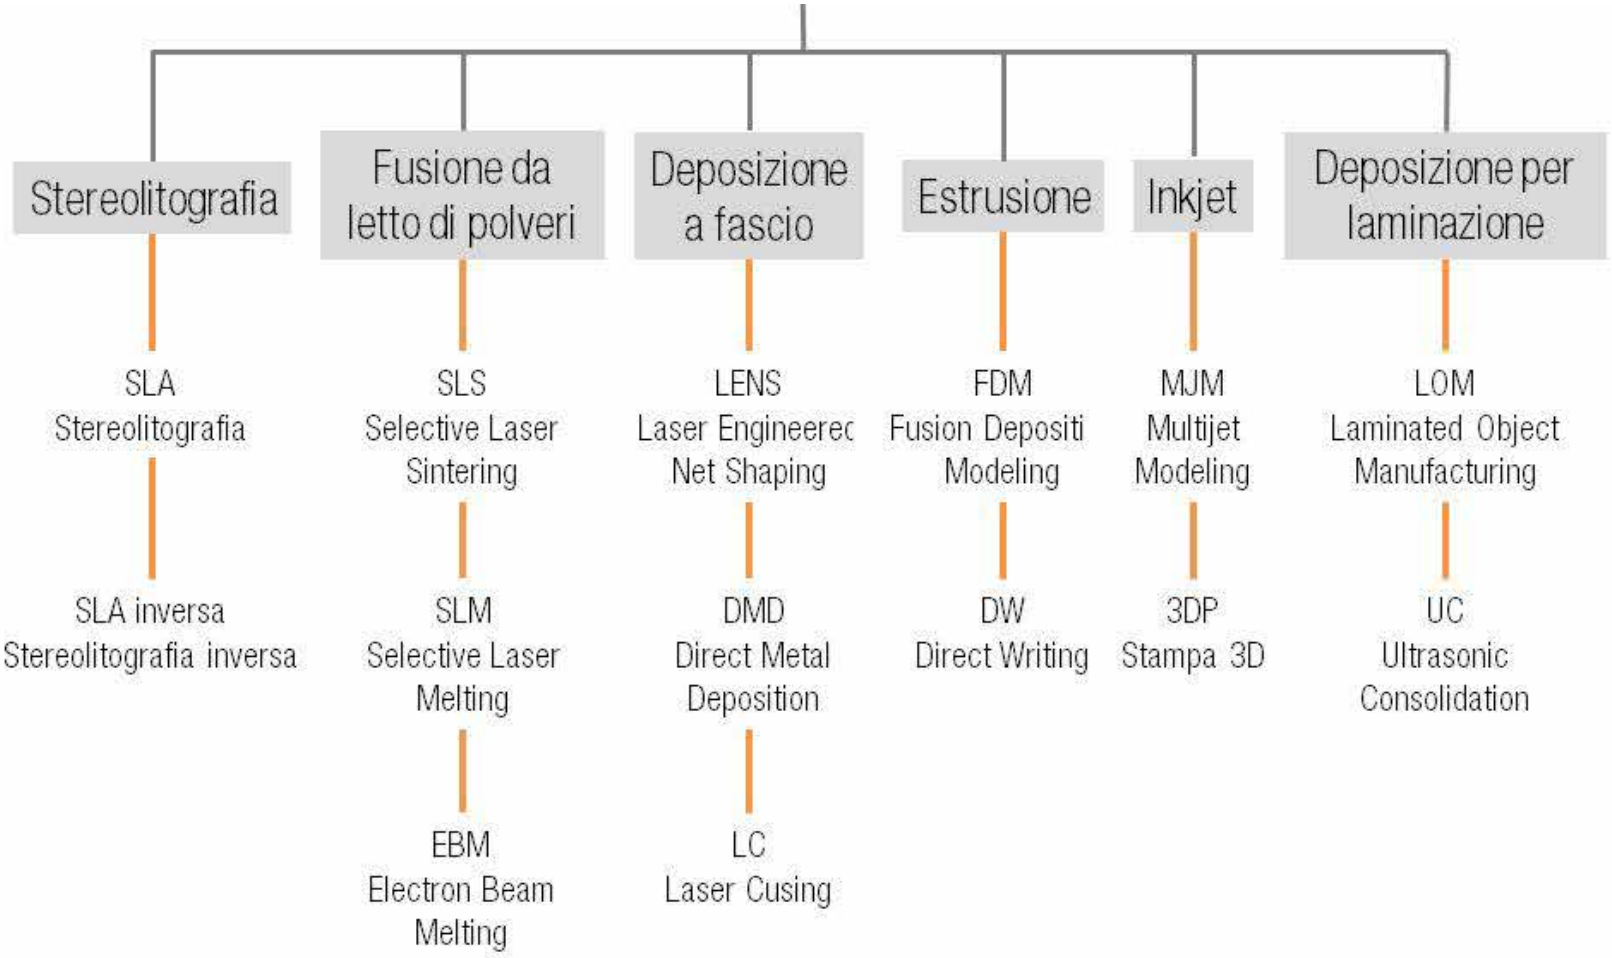


#FIBRE LUNGHE

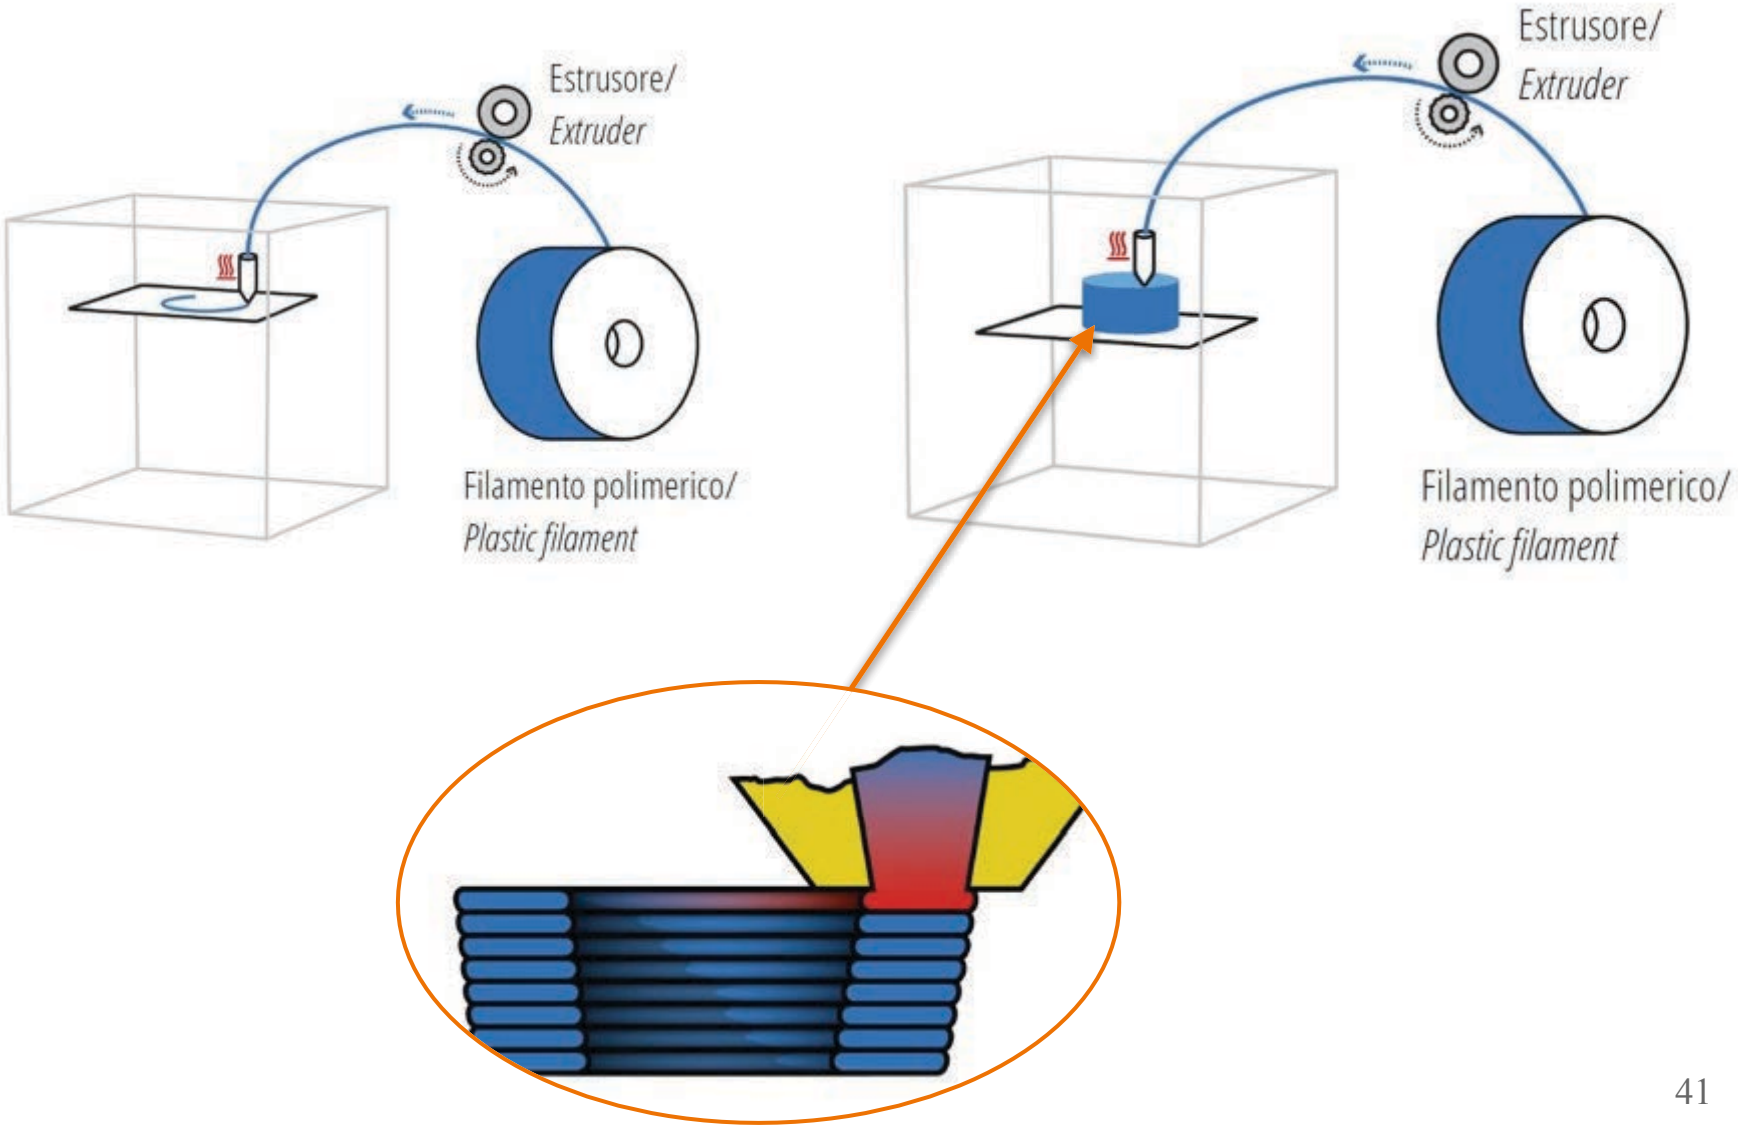




La manifattura additiva



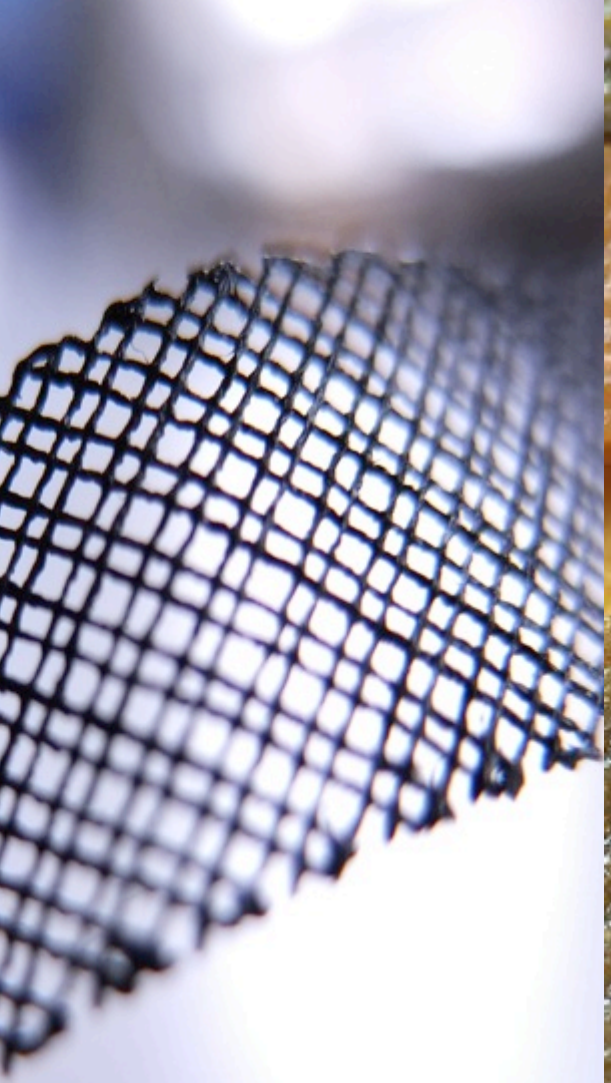
layer by layer process



L’idea

L’idea

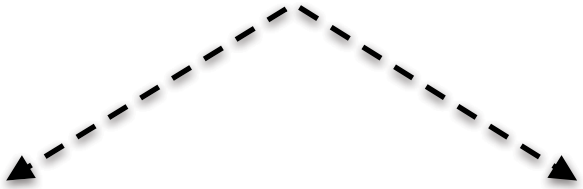
E’ possibile ottenere materiali compositi da tecnologie additive a basso costo?



le 3 linee di ricerca

Quale matrice per la manifattura additiva di compositi

MATRICE

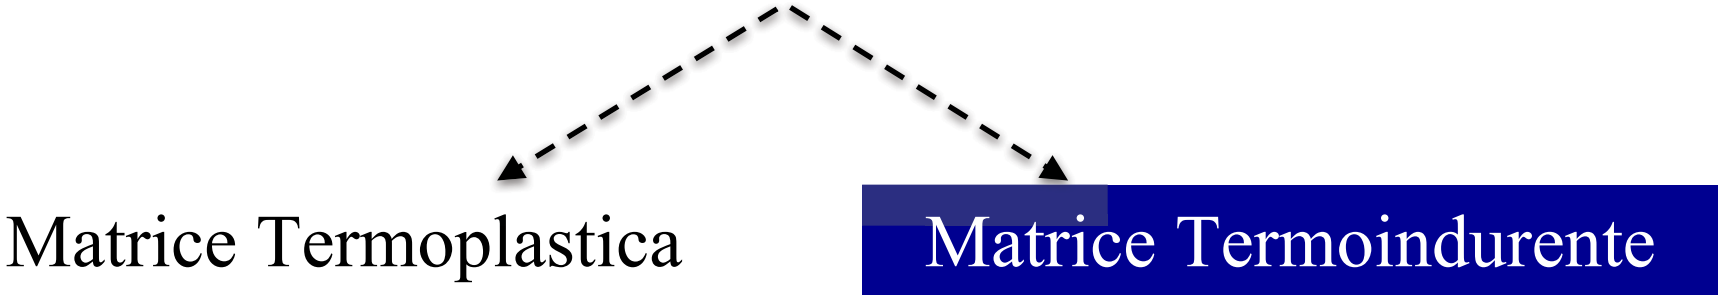


Matrice Termoplastica

Matrice Termoindurente

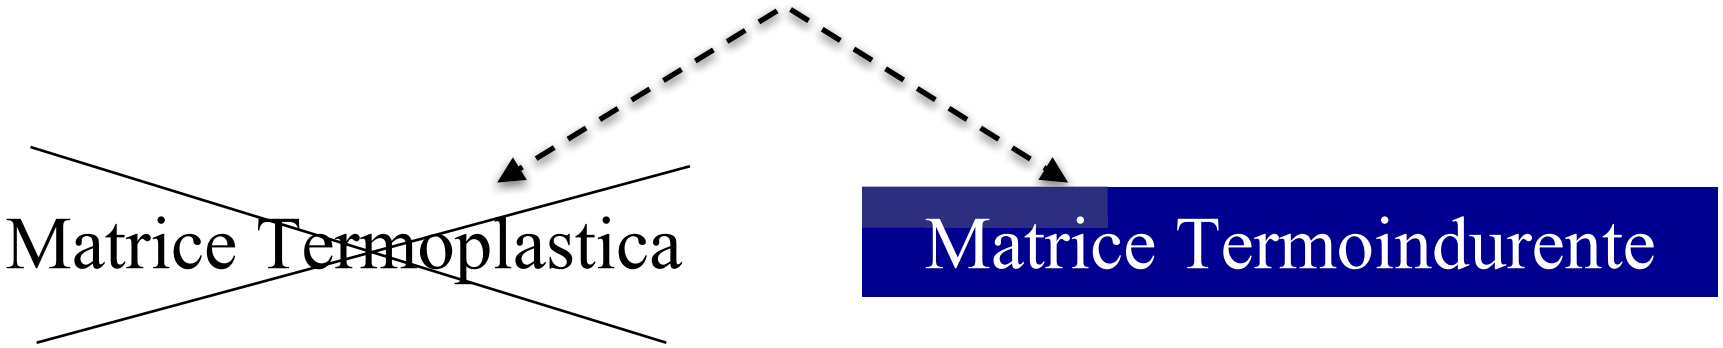
Quale matrice per la manifattura additiva di compositi

MATRICE

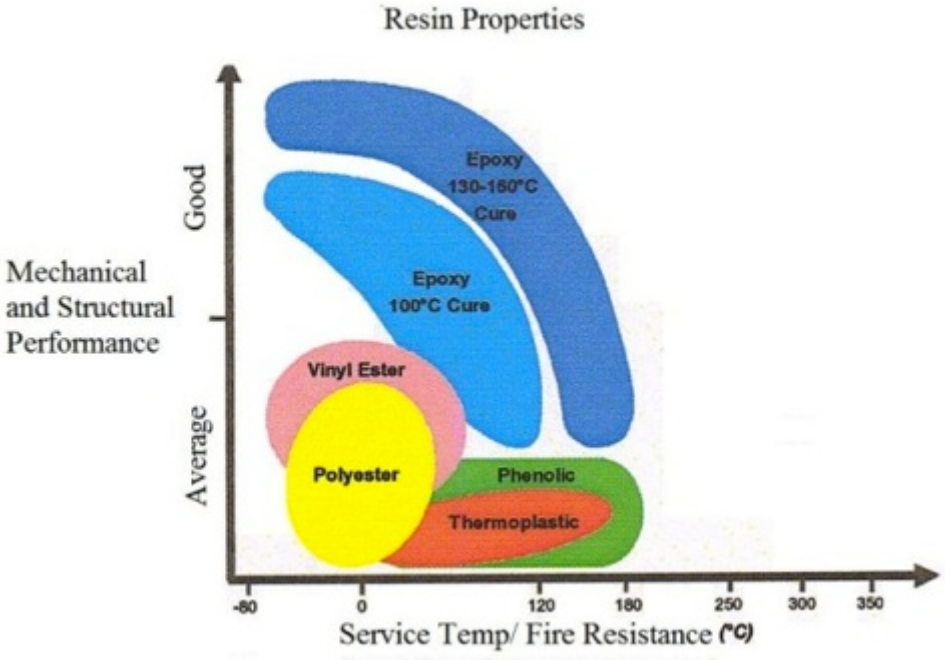


MATRICE

Quale matrice per la manifattura additiva di compositi



L'importanza della matrice



Matrice Termoindurente

- Prestazioni meccaniche
- Resistenza chimica
- Temperature di esercizio
- Bassa igroscopicità
- Costo

L’importanza della matrice

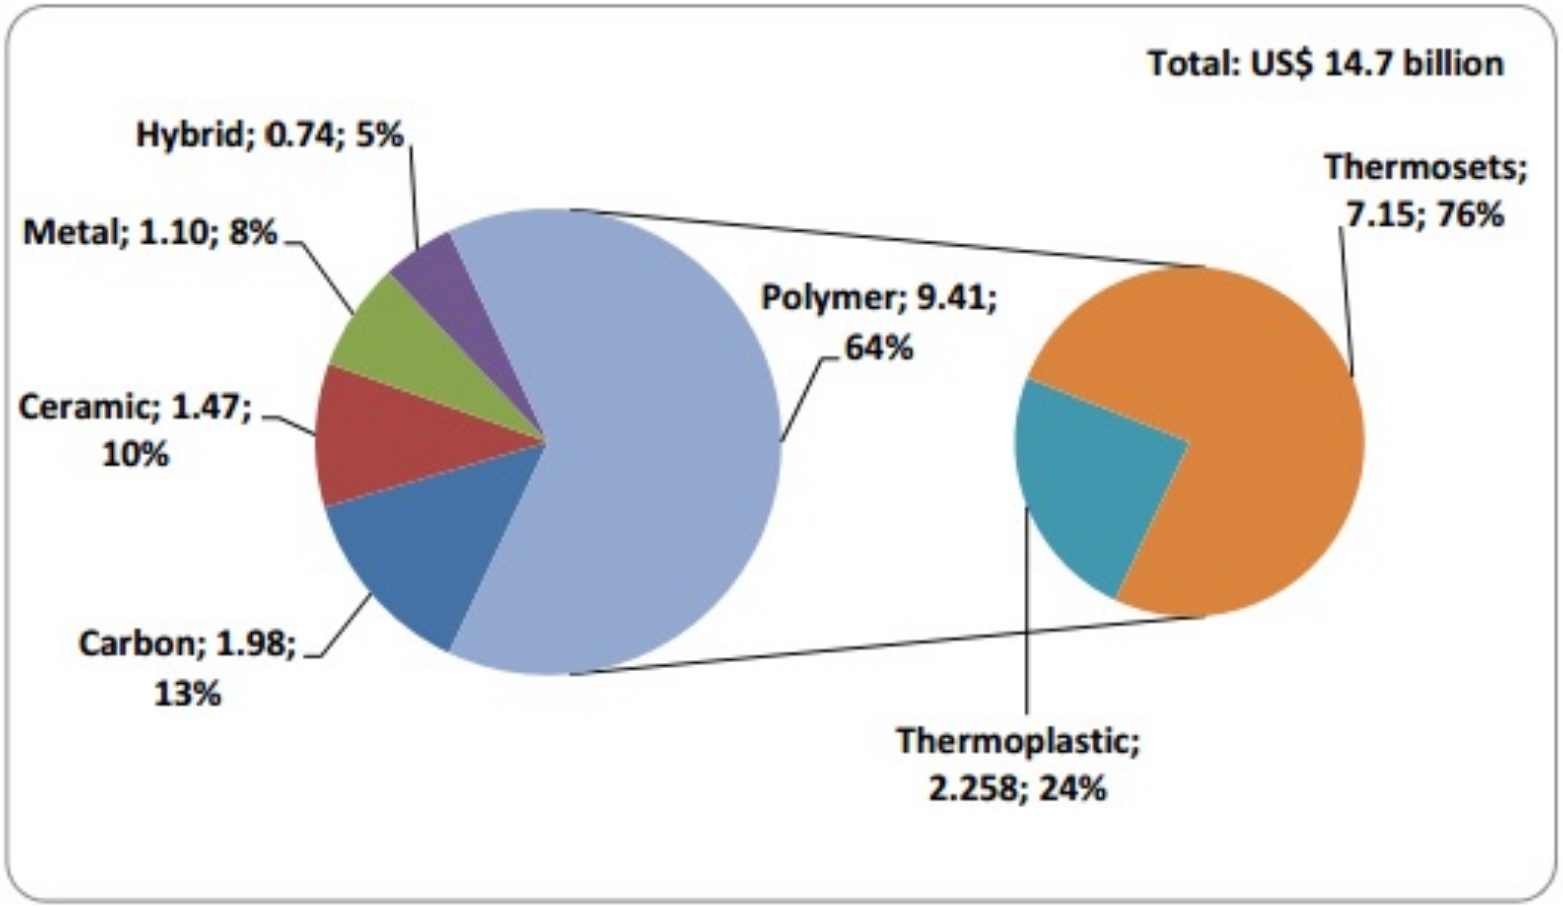


Fig. 7: Carbon composite revenues in US$ billion by matrix material (2013). [2]

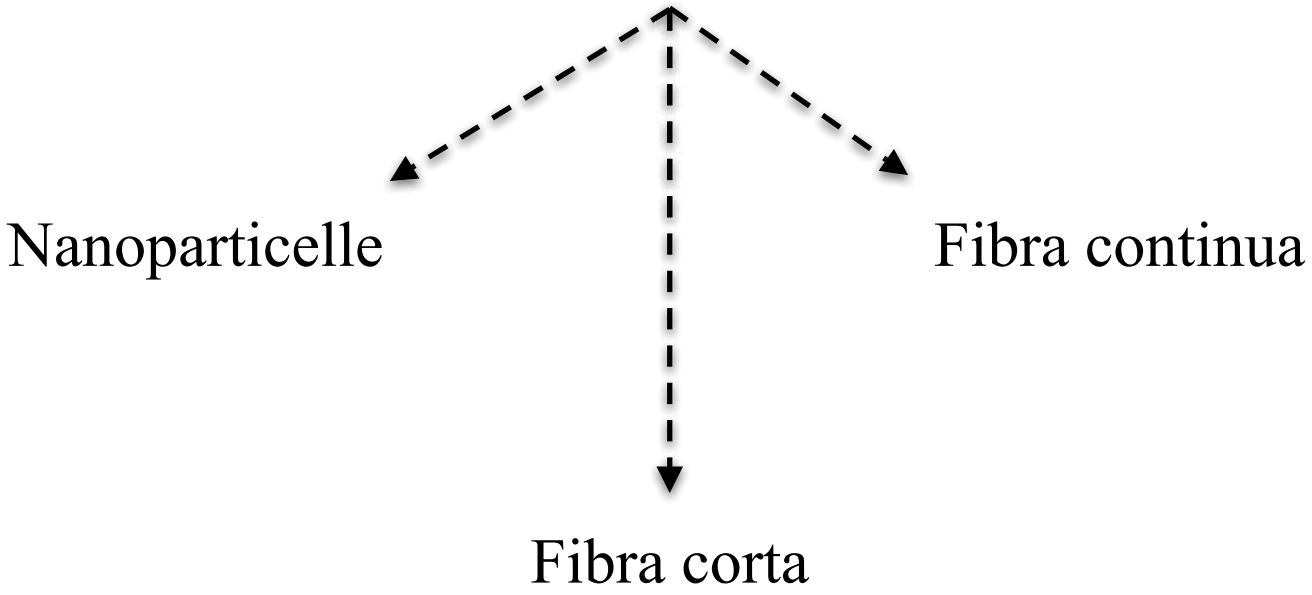
COMPOSITES MARKET REPORT 2014: *Carbon Composites & Federation of reinforced plastics*

MATERIALI COMPOSITI
a matrice termoindurente

3 linee di ricerca

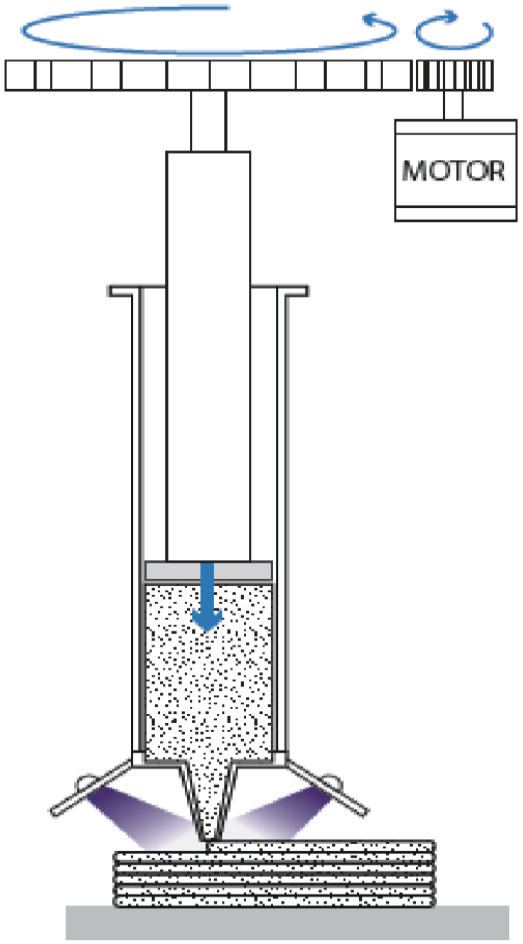


compositi a fibra corta e nanocompositi...

Liquid Deposition Modelling

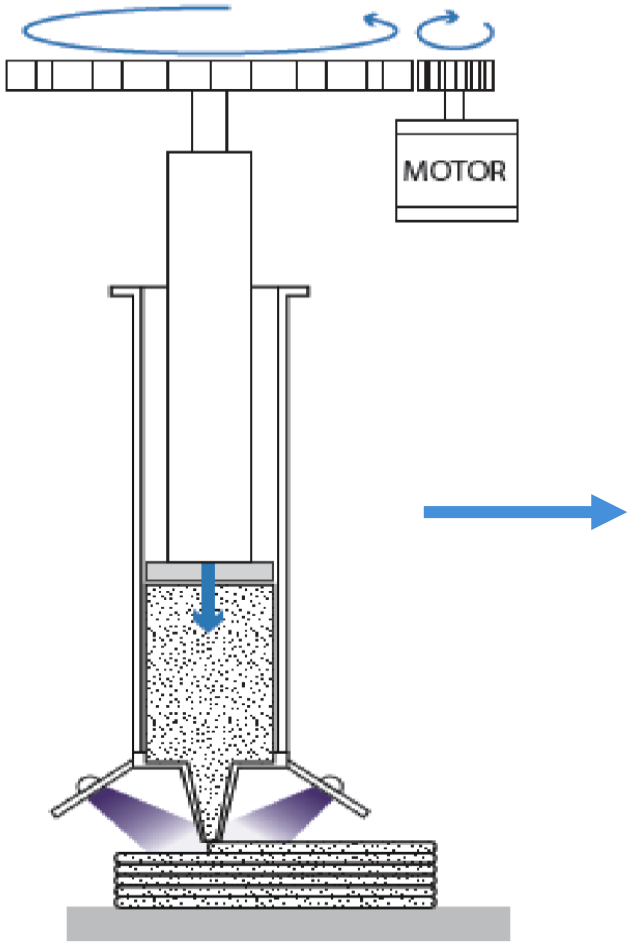
LDM

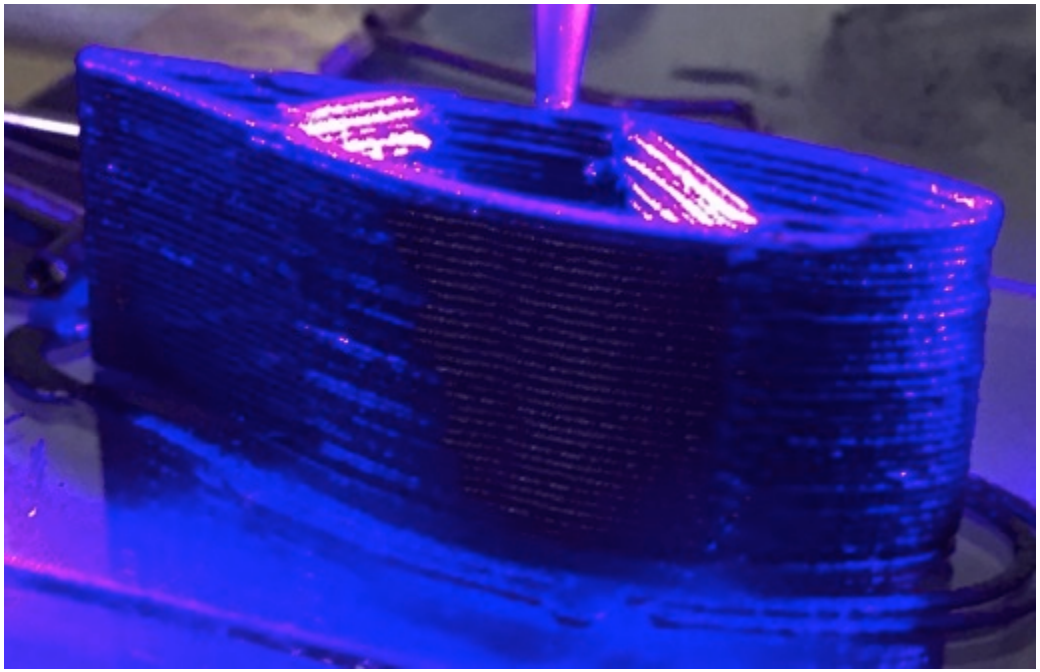
- materiale allo stato liquido
- sistema di estrusione a pistone
- apparato di polimerizzazione



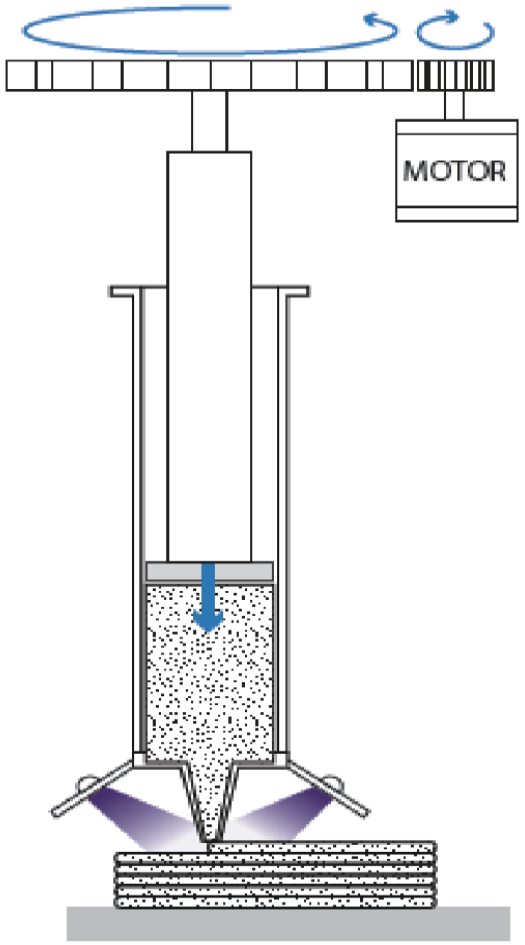
Liquid Deposition Modelling

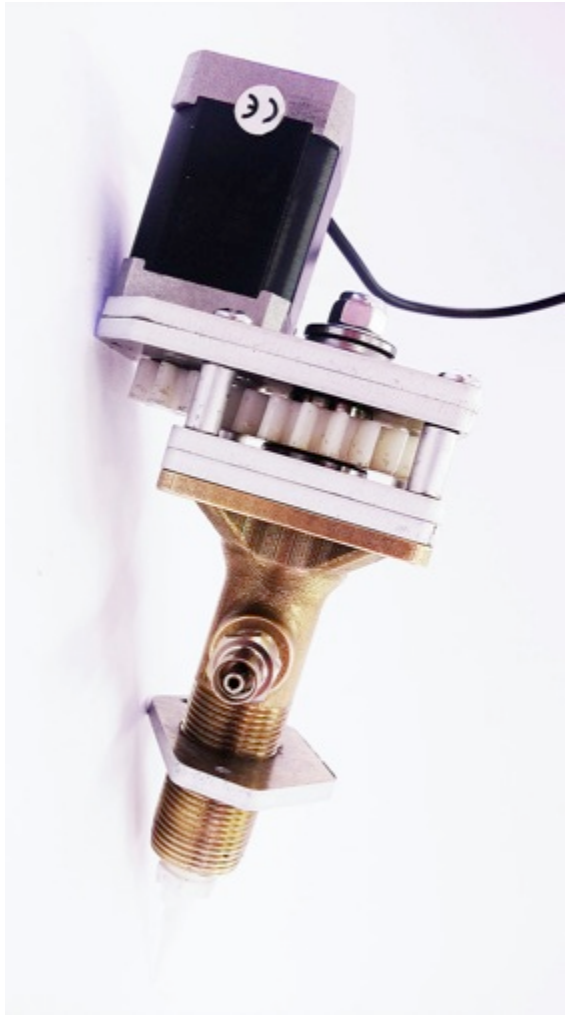
LDM

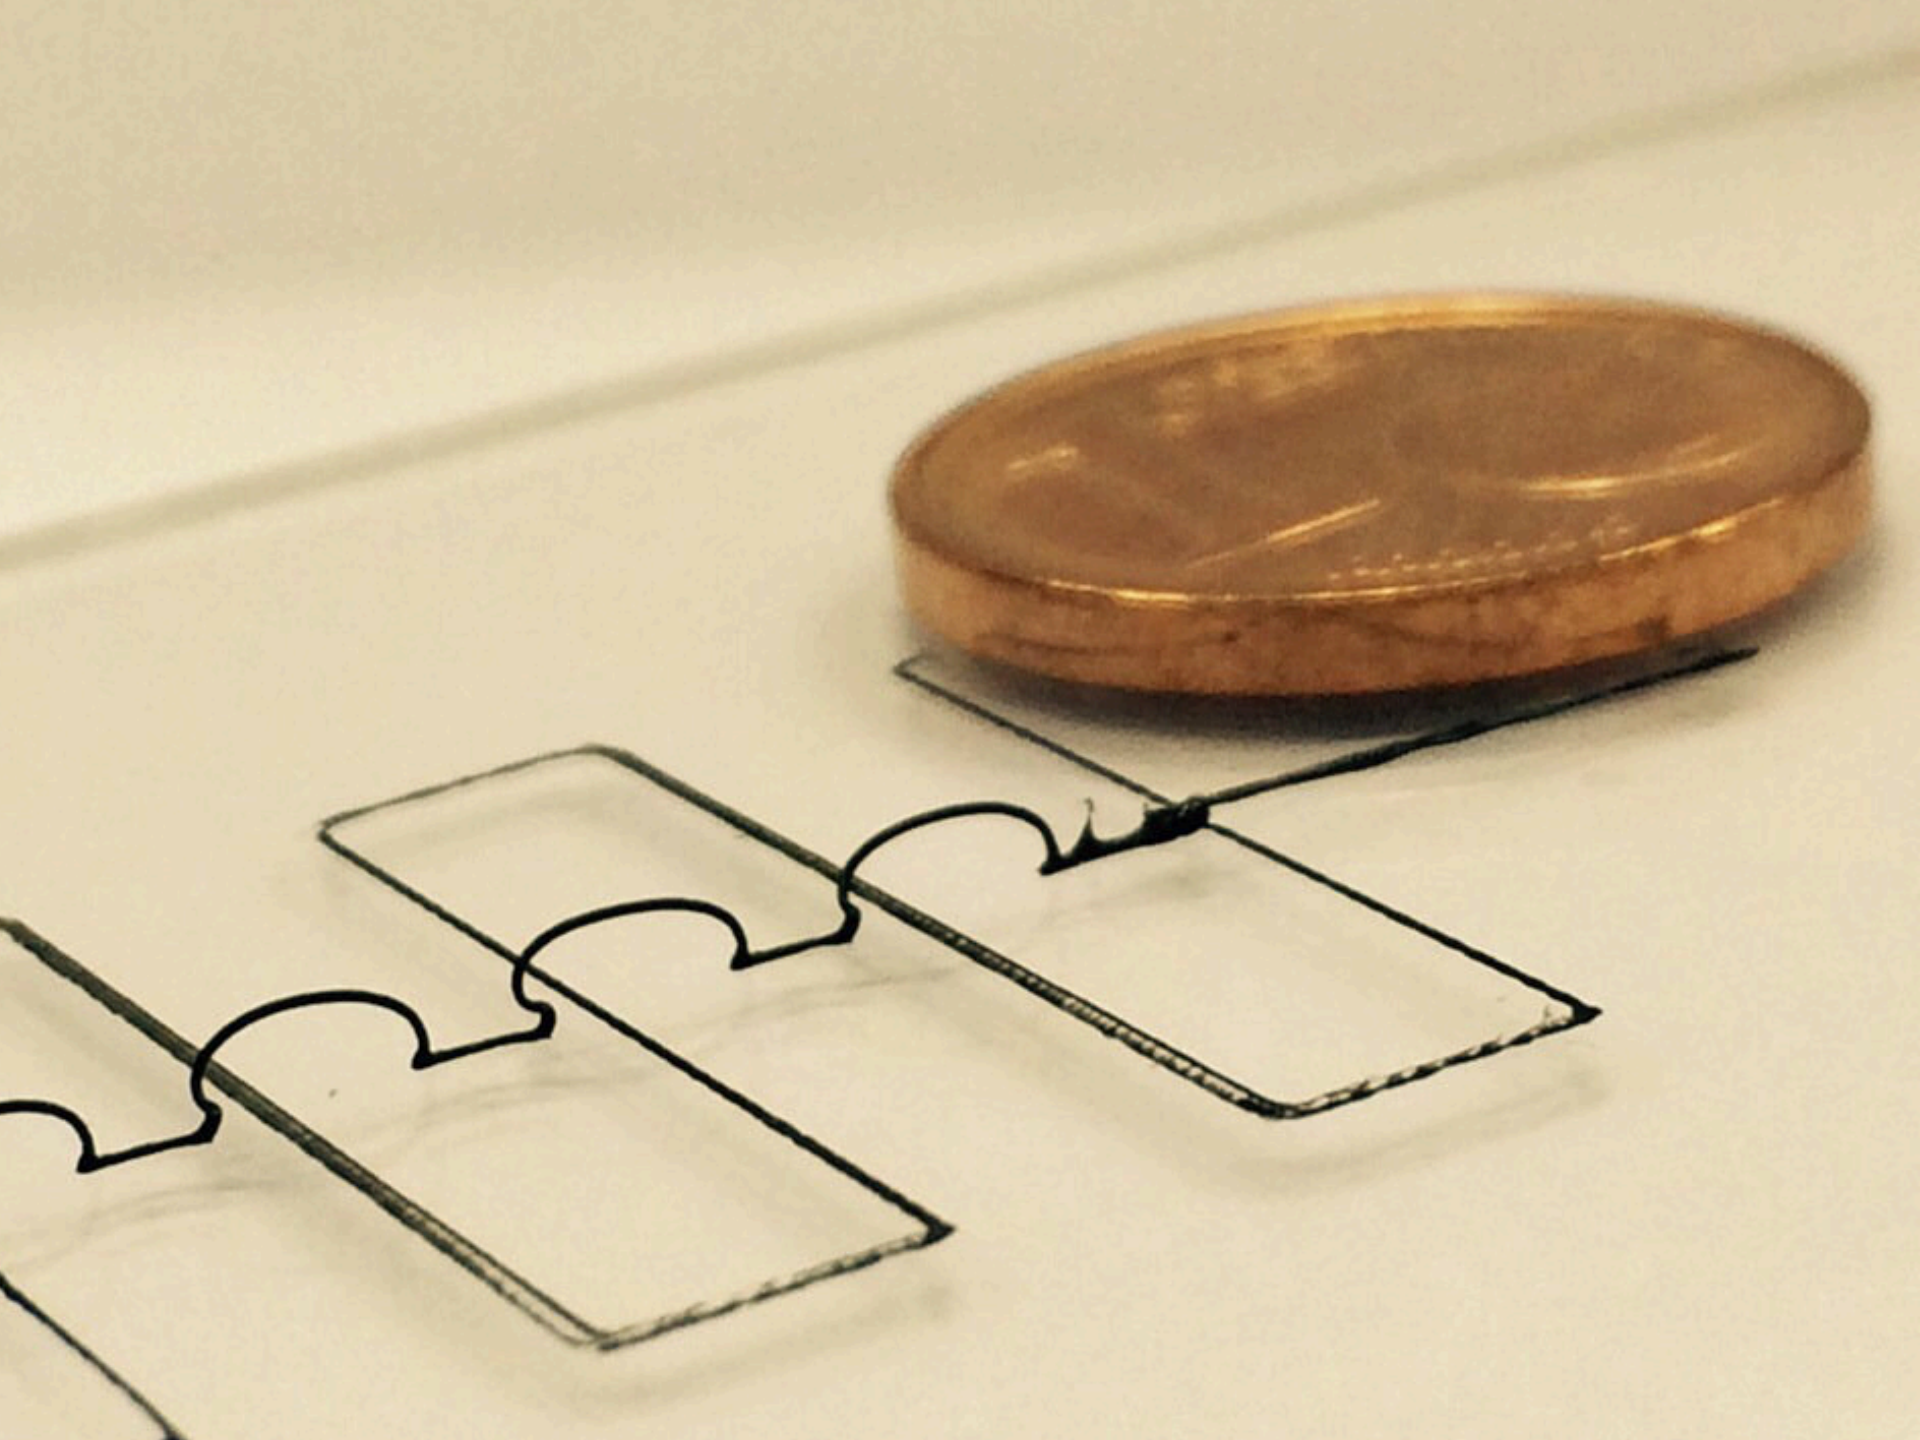




Estrusore a siringa / Estrusore a vite senza fine LDM





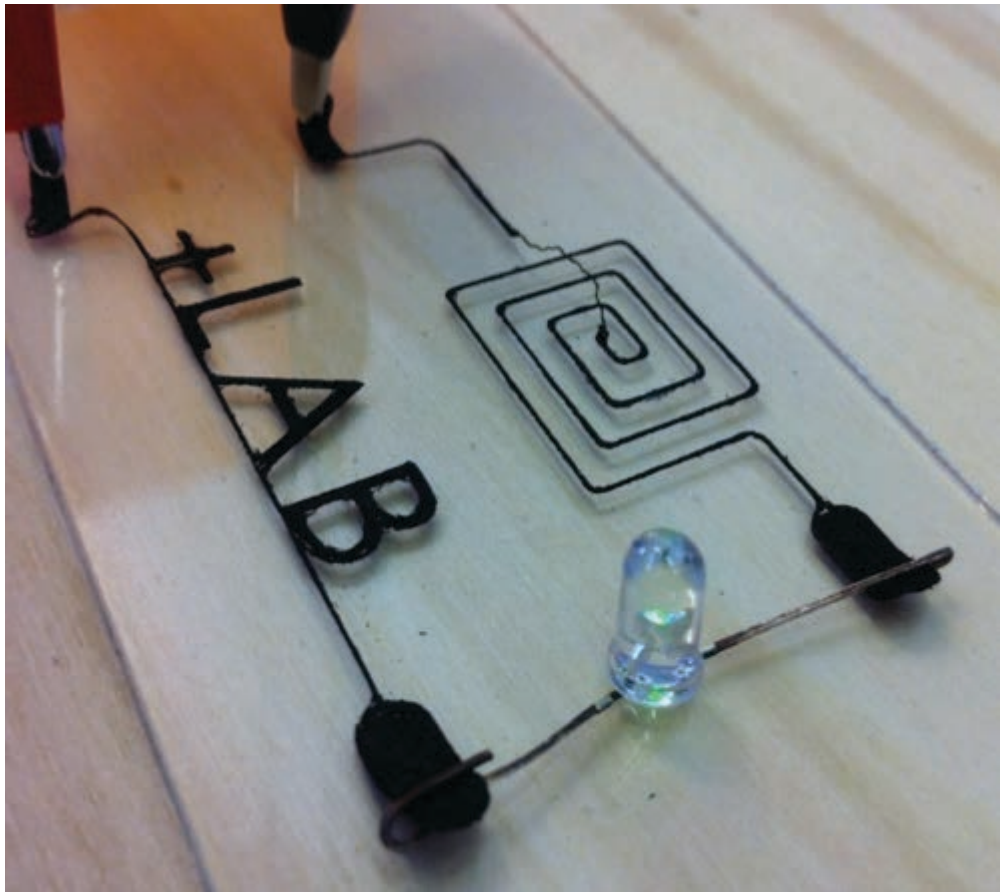


nanocompositi conduttivi a base di nanotubi di carbonio

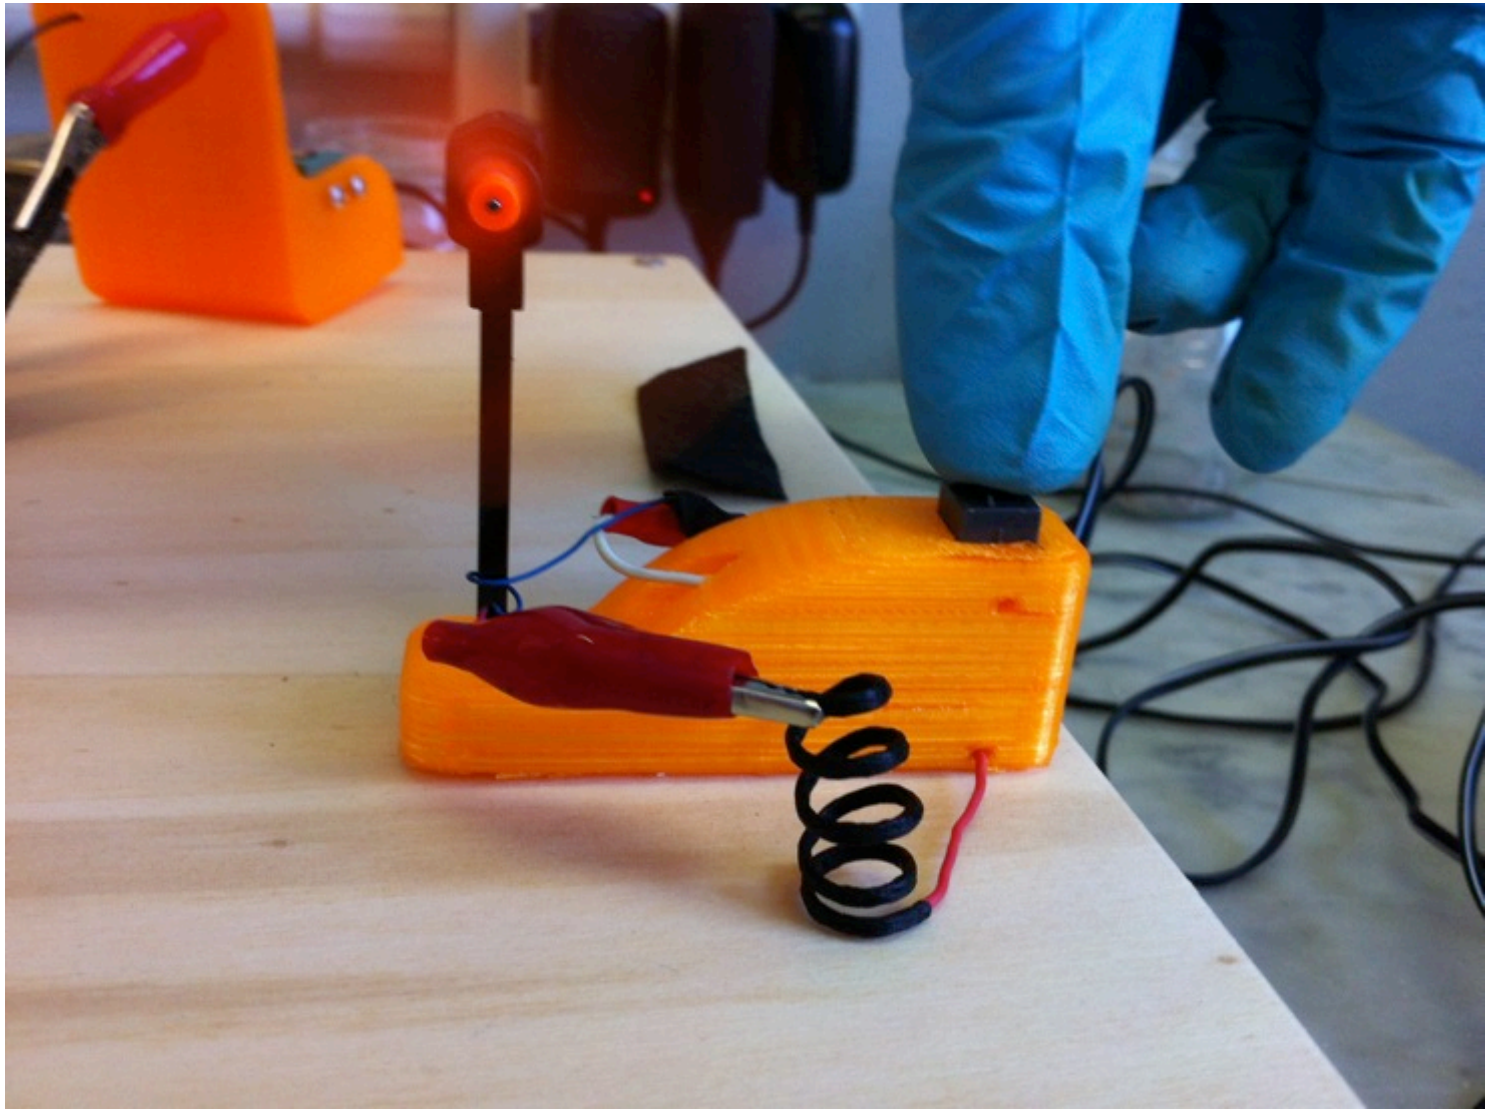
Nanotubi di Carbonio

Grafene

- proprietà meccaniche
- conducibilità elettrica
- conducibilità termica



nanocompositi conduttivi



Compositi a fibra corta..

compositi a fibra corta

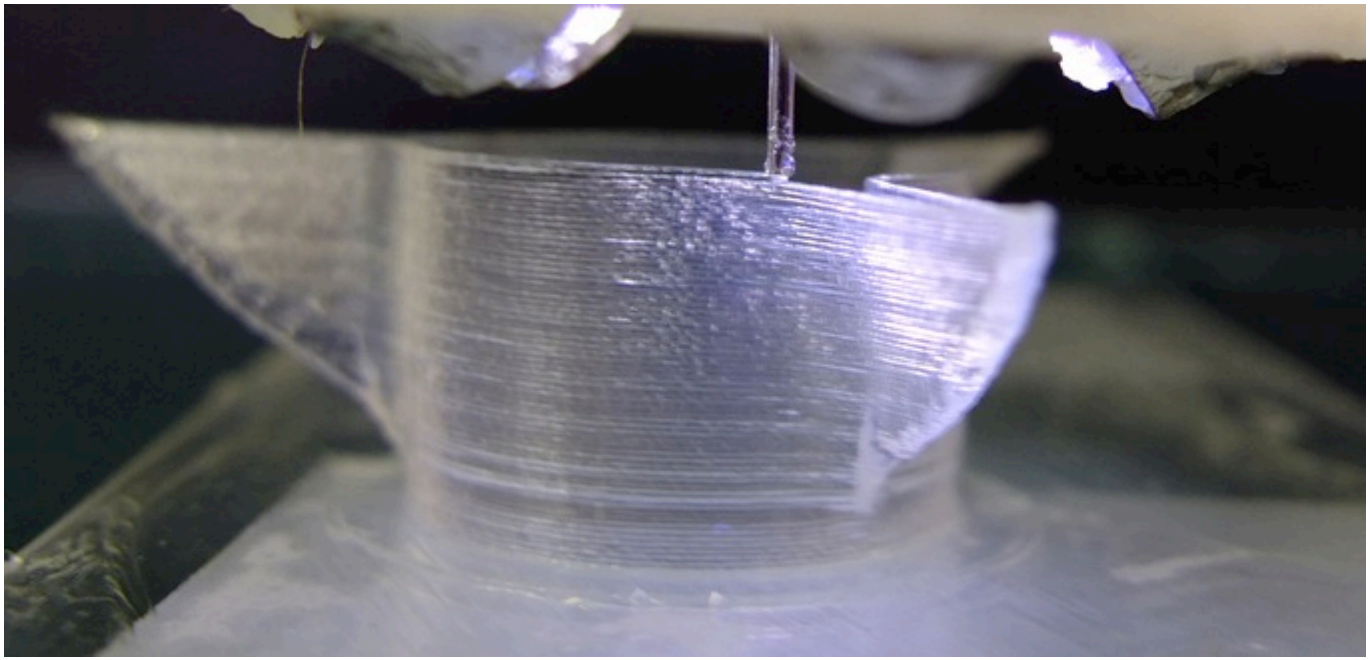
Matrice

- Epossidica
- Acrilica
- Poliuretanica
- Poliestere

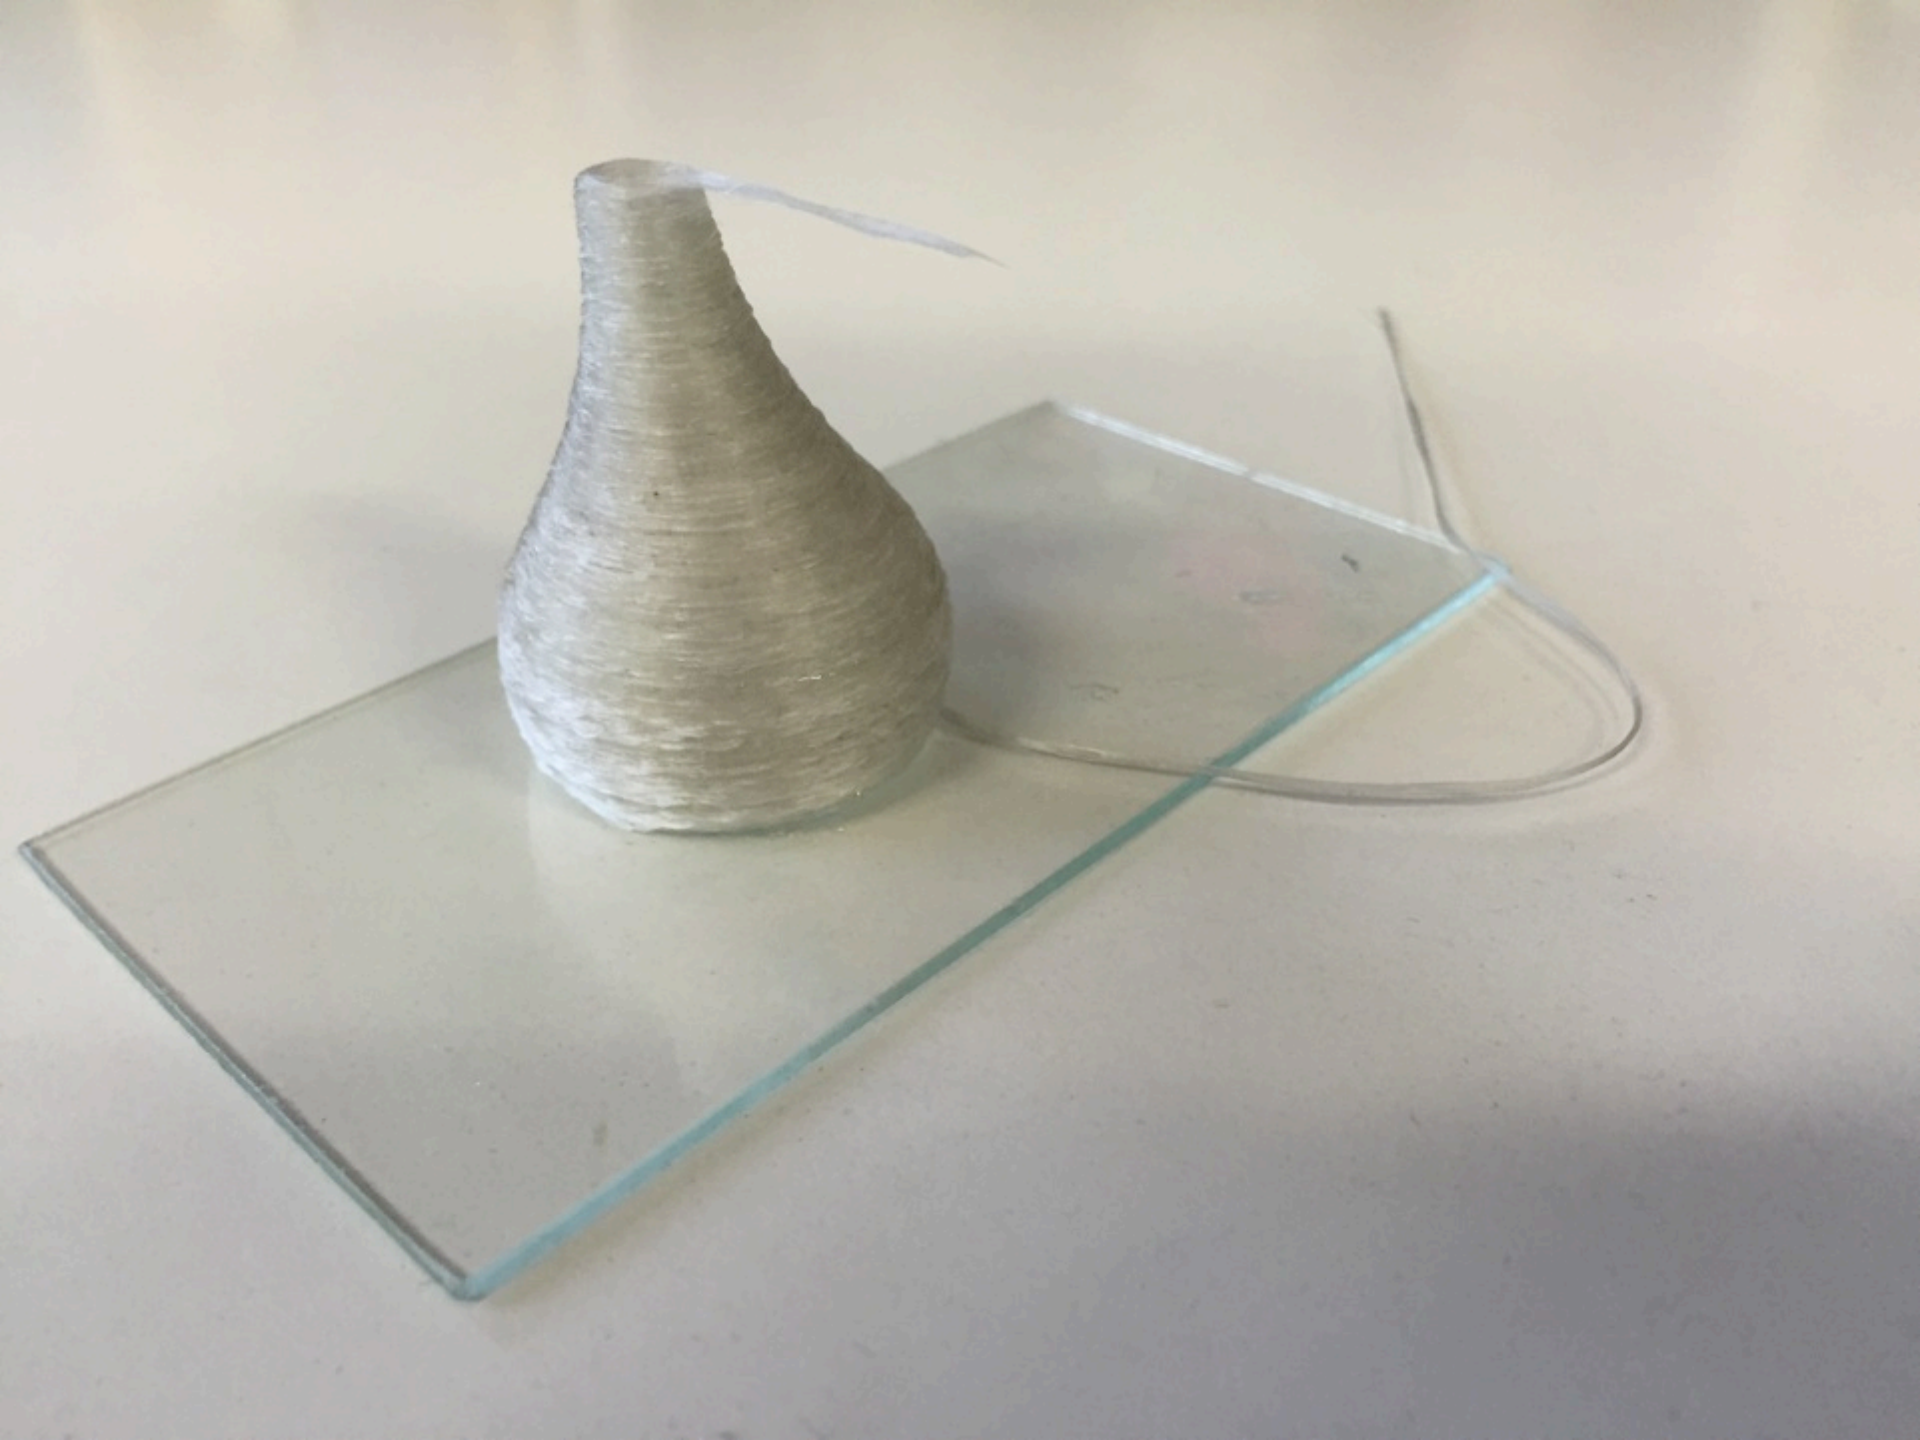
+

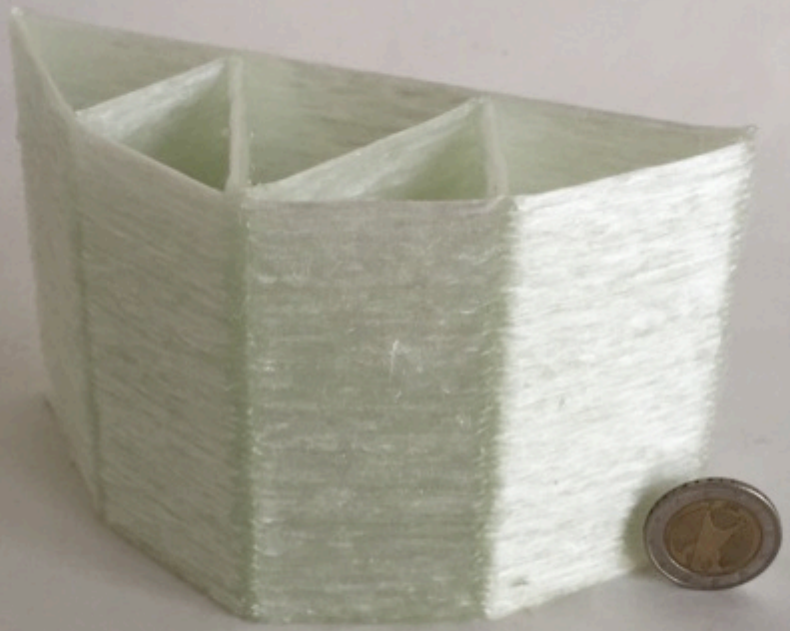
Fibre

- Carbonio
- Vetro
- Kevlar
- Fibre naturali

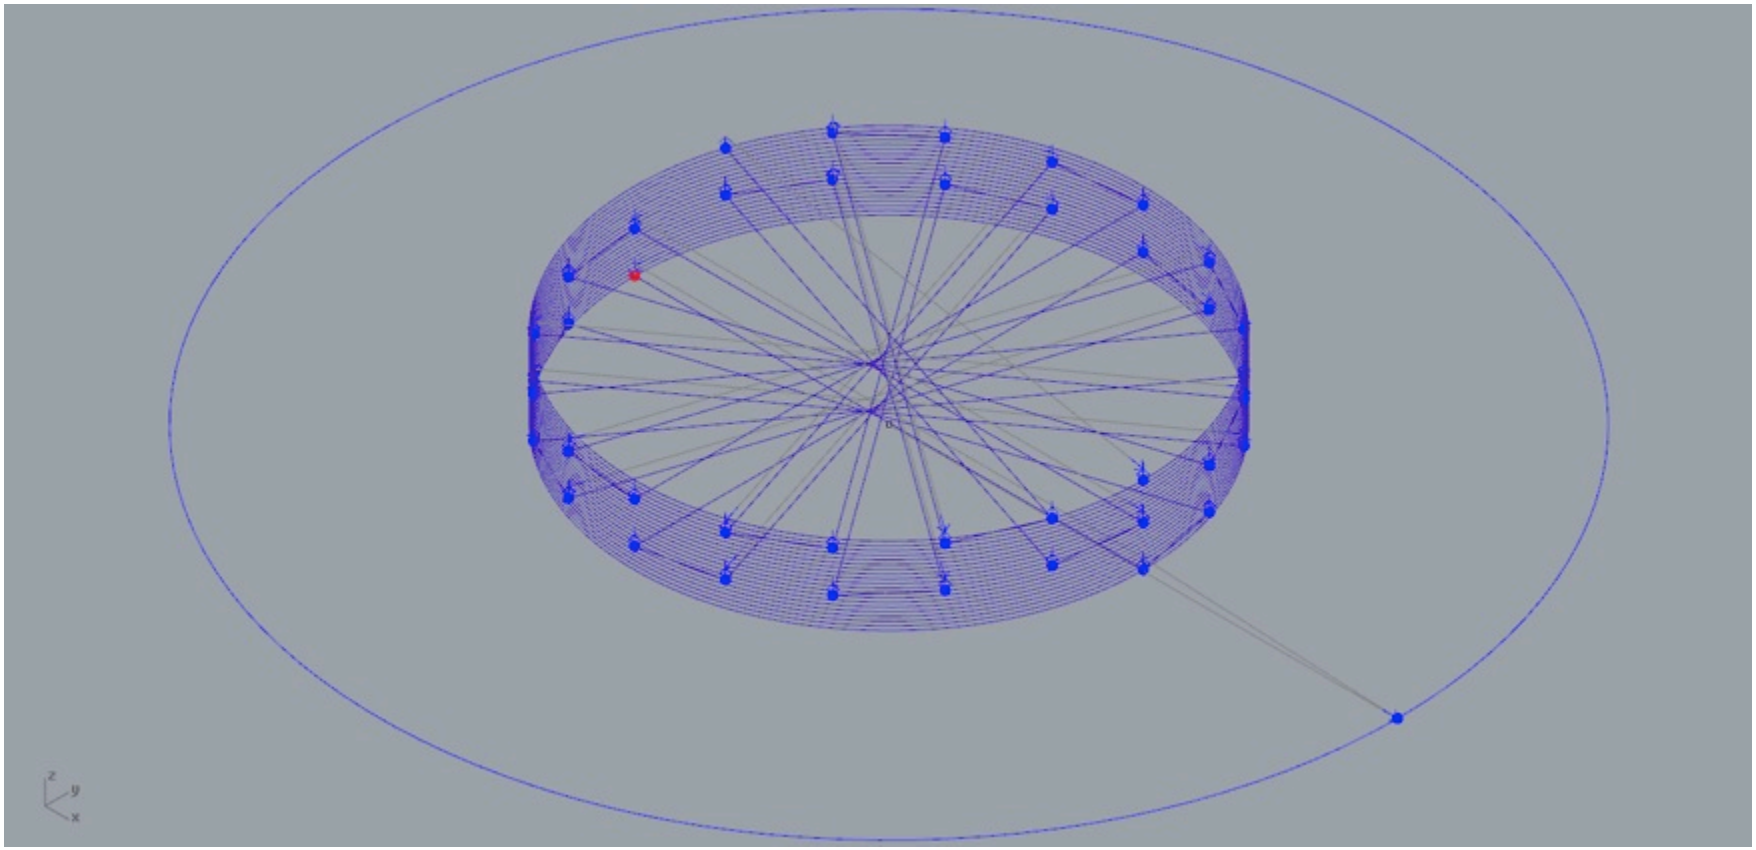


Compositi a fibra corta



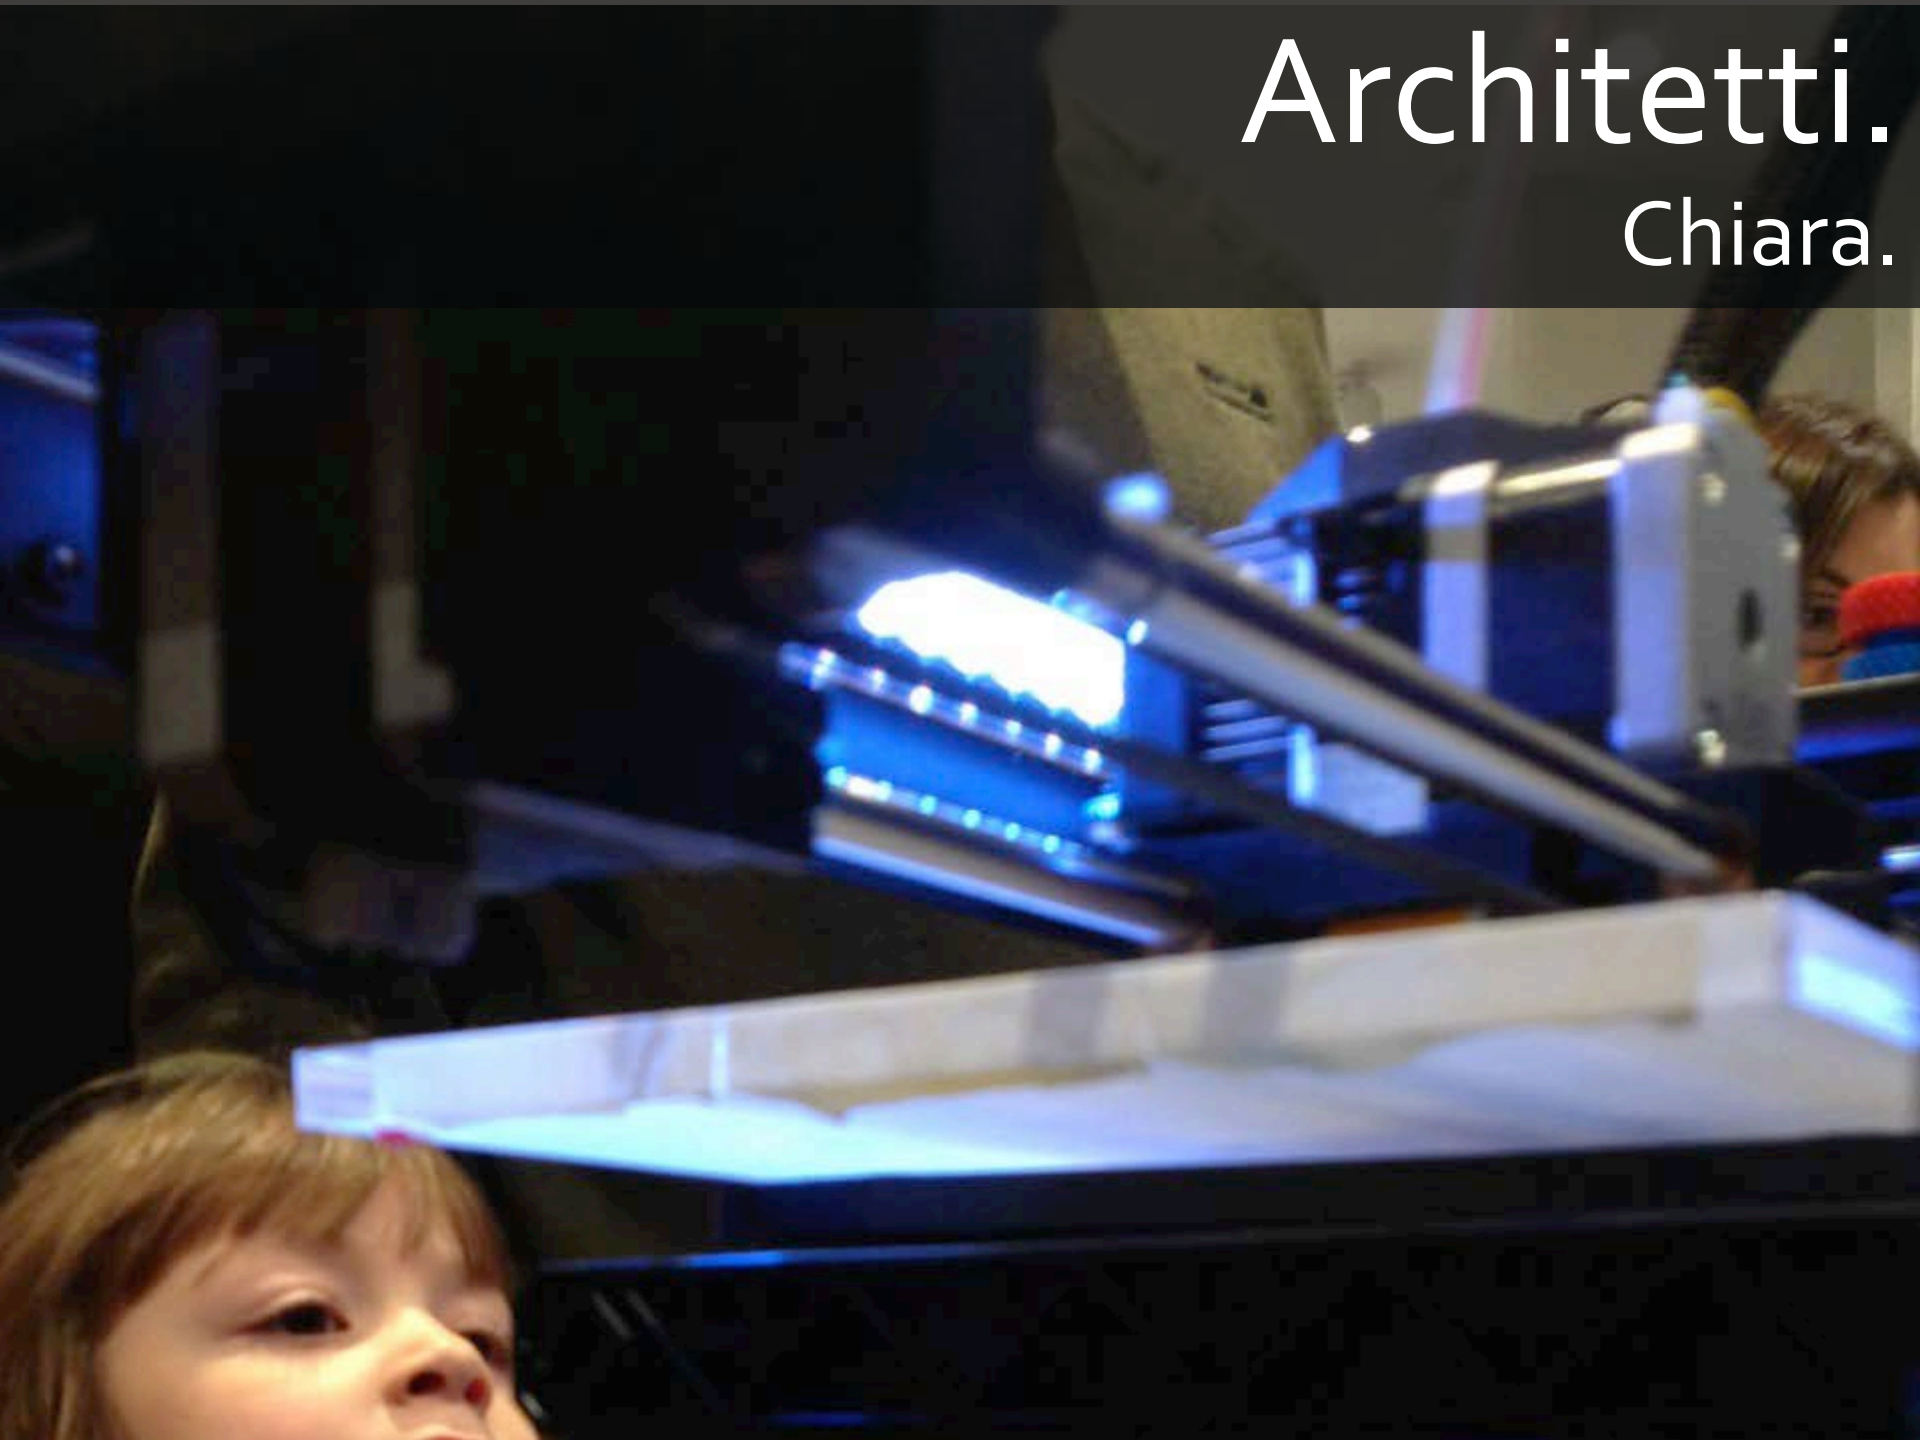


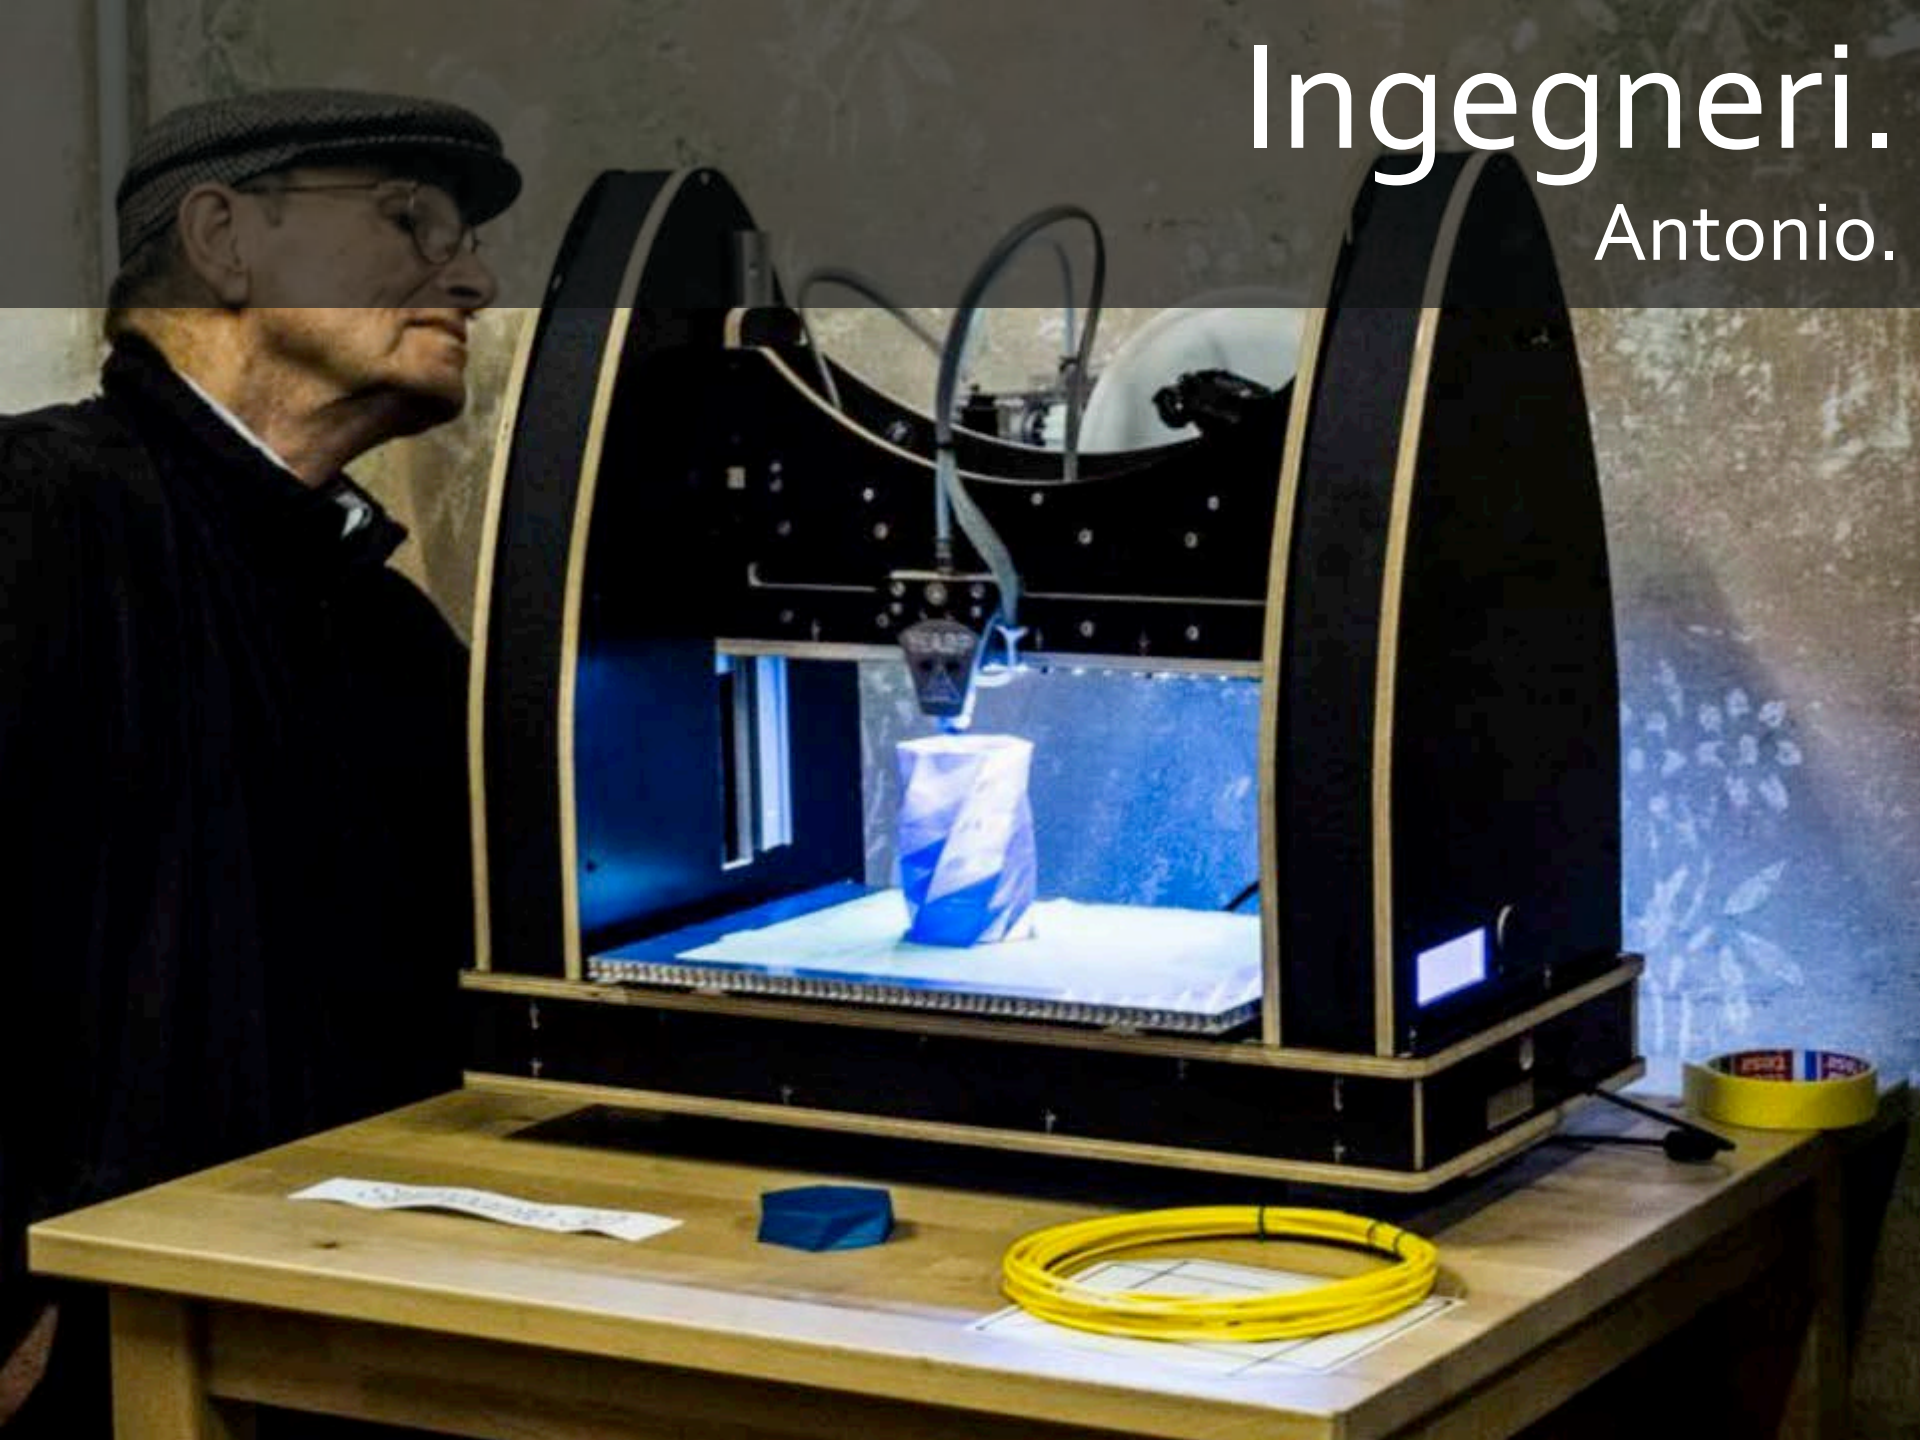
Grasshopper e lo Slicing NON lineare.



Architetti.

Chiara.





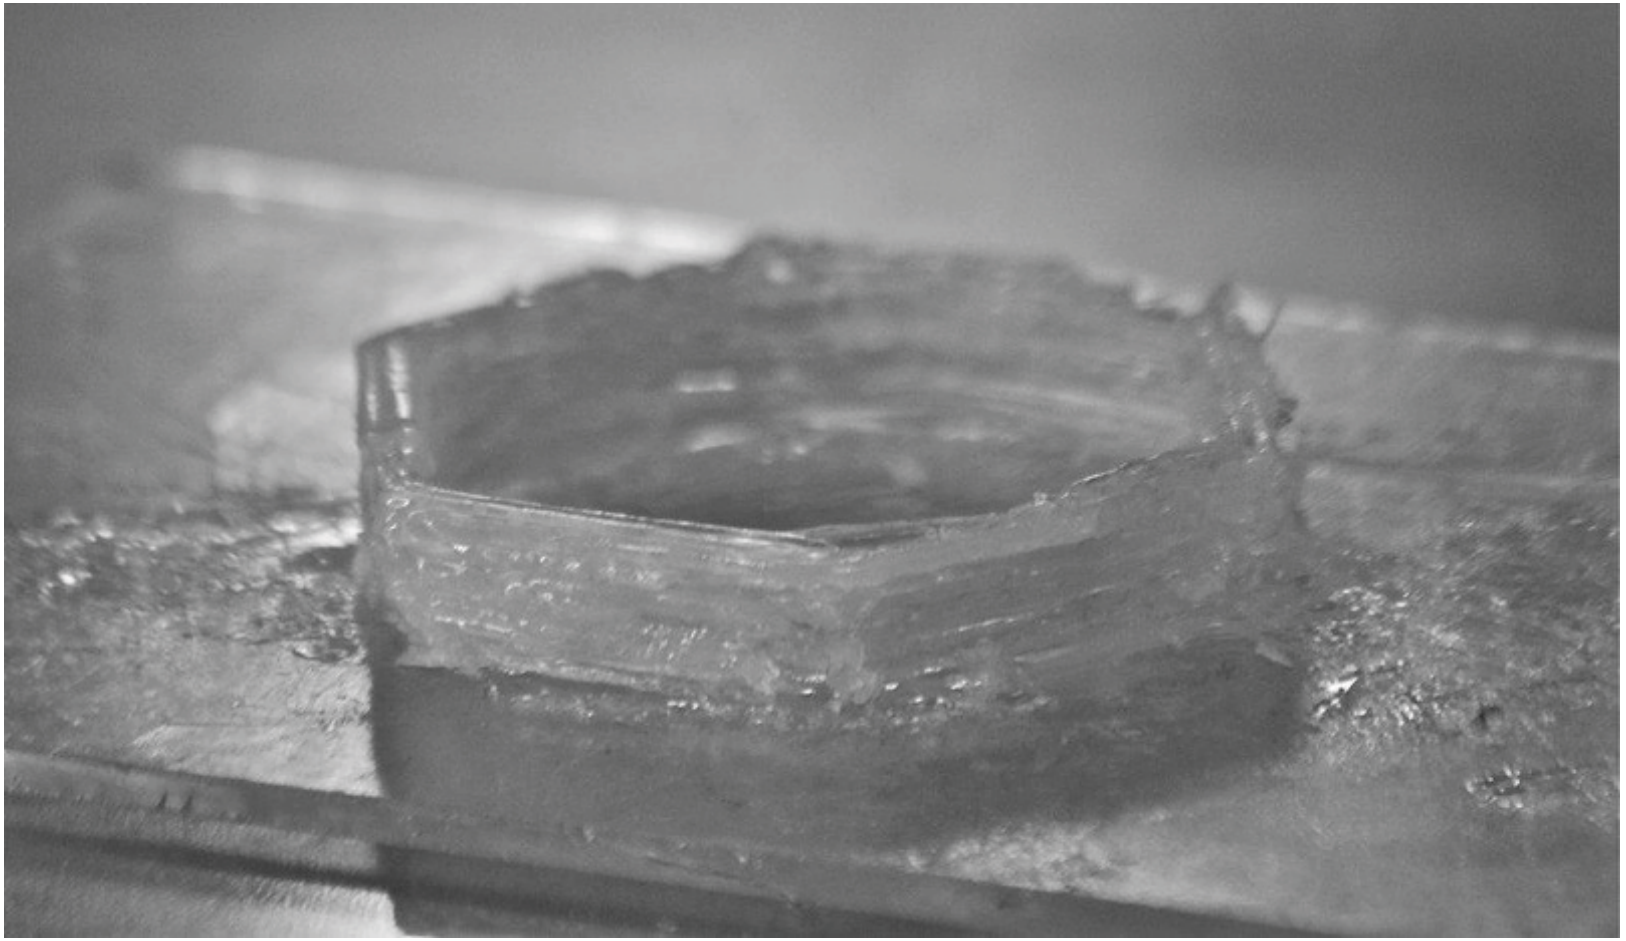
Ingegneri.
Antonio.

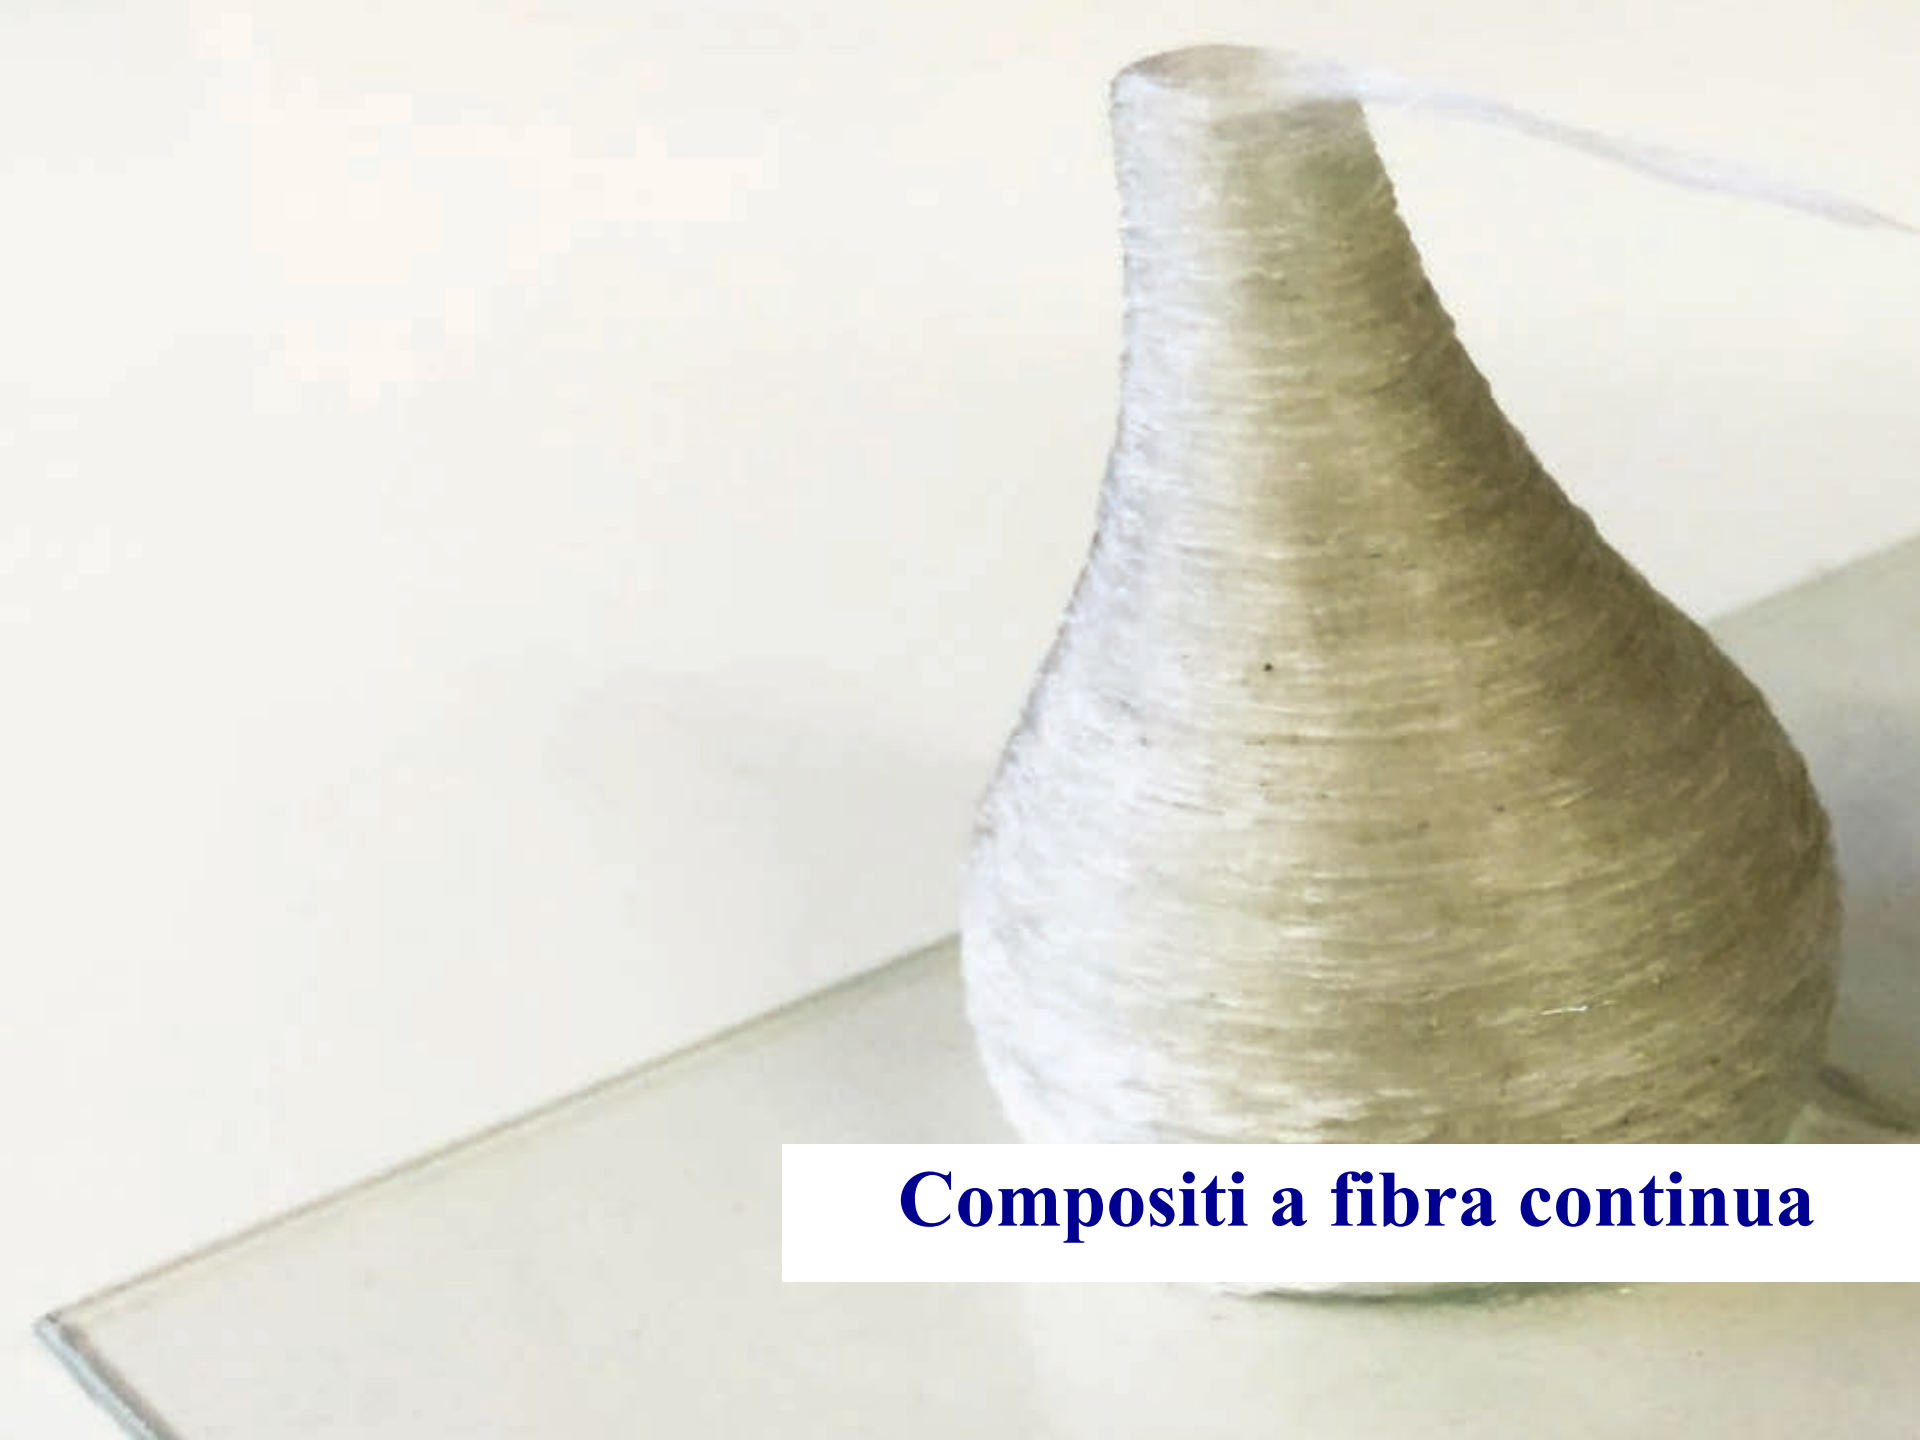
Piccole grandi persone.

La scuola elementare di Brozzo.

12/12/2014 Hello World!.gcode

Il primo pezzo stampato in 3D con resina termoindurente a fibra continua





Compositi a fibra continua

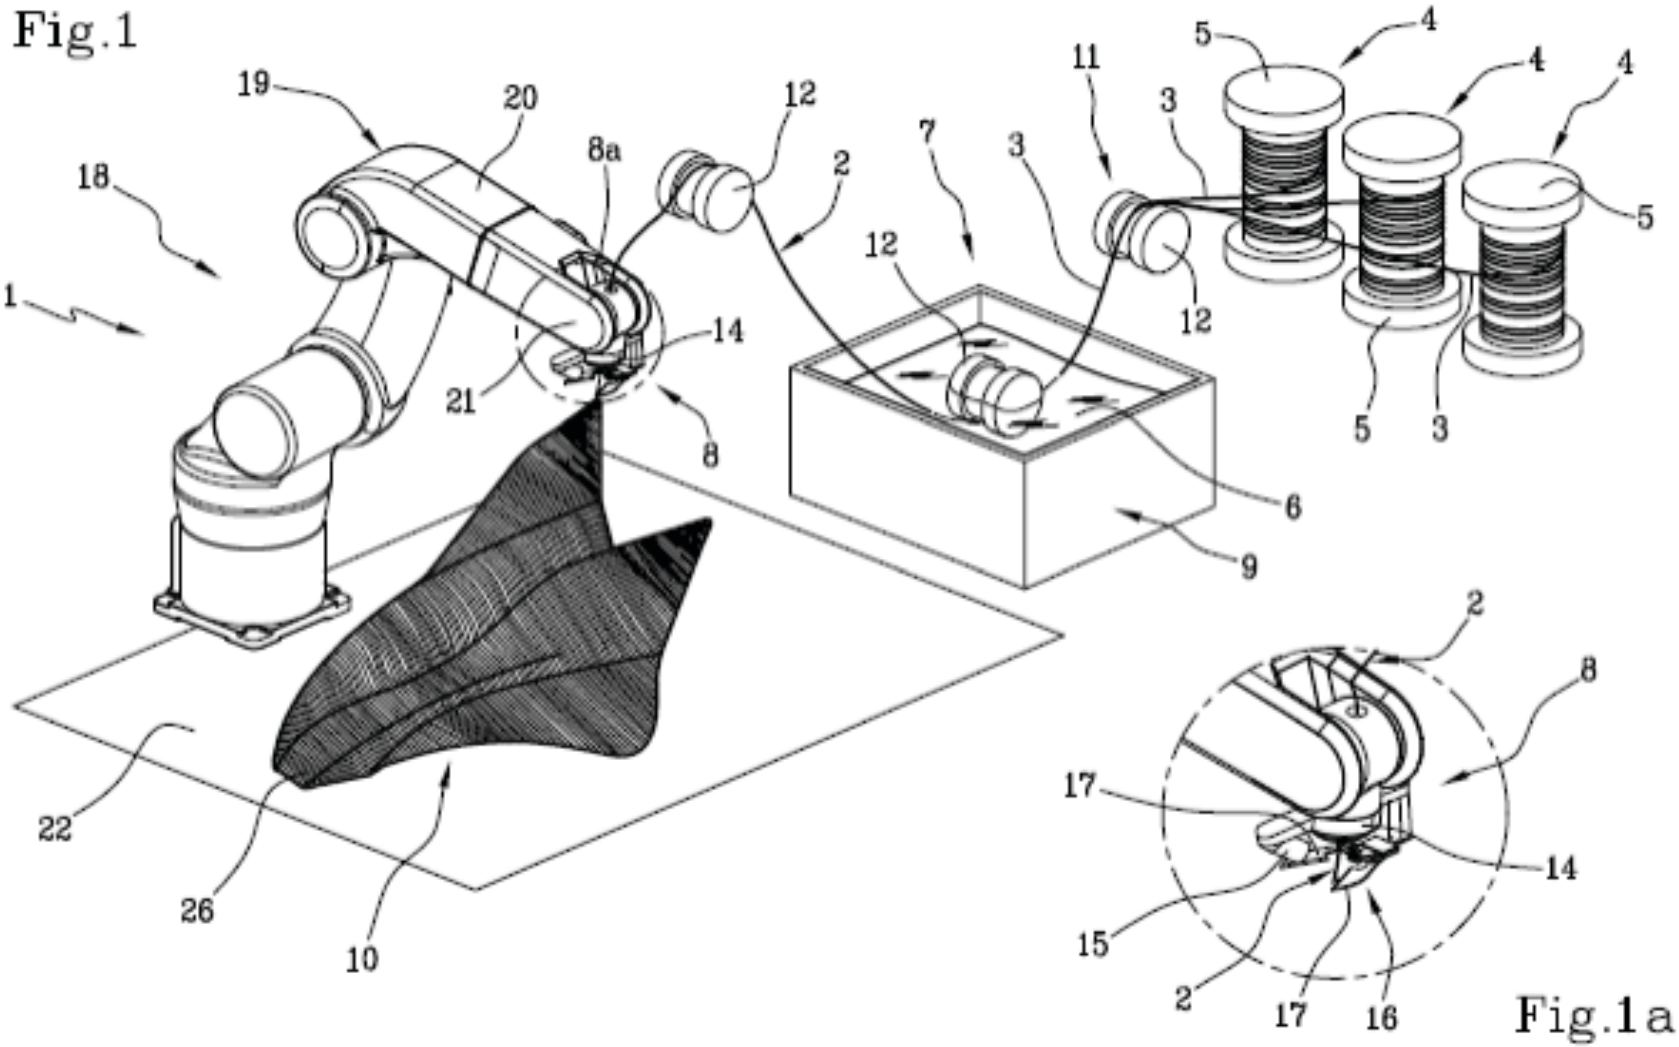
Il sistema di stampa 3D di materiali compositi a matrice termoindurente caricati a fibra continua è stato depositato come

brevetto

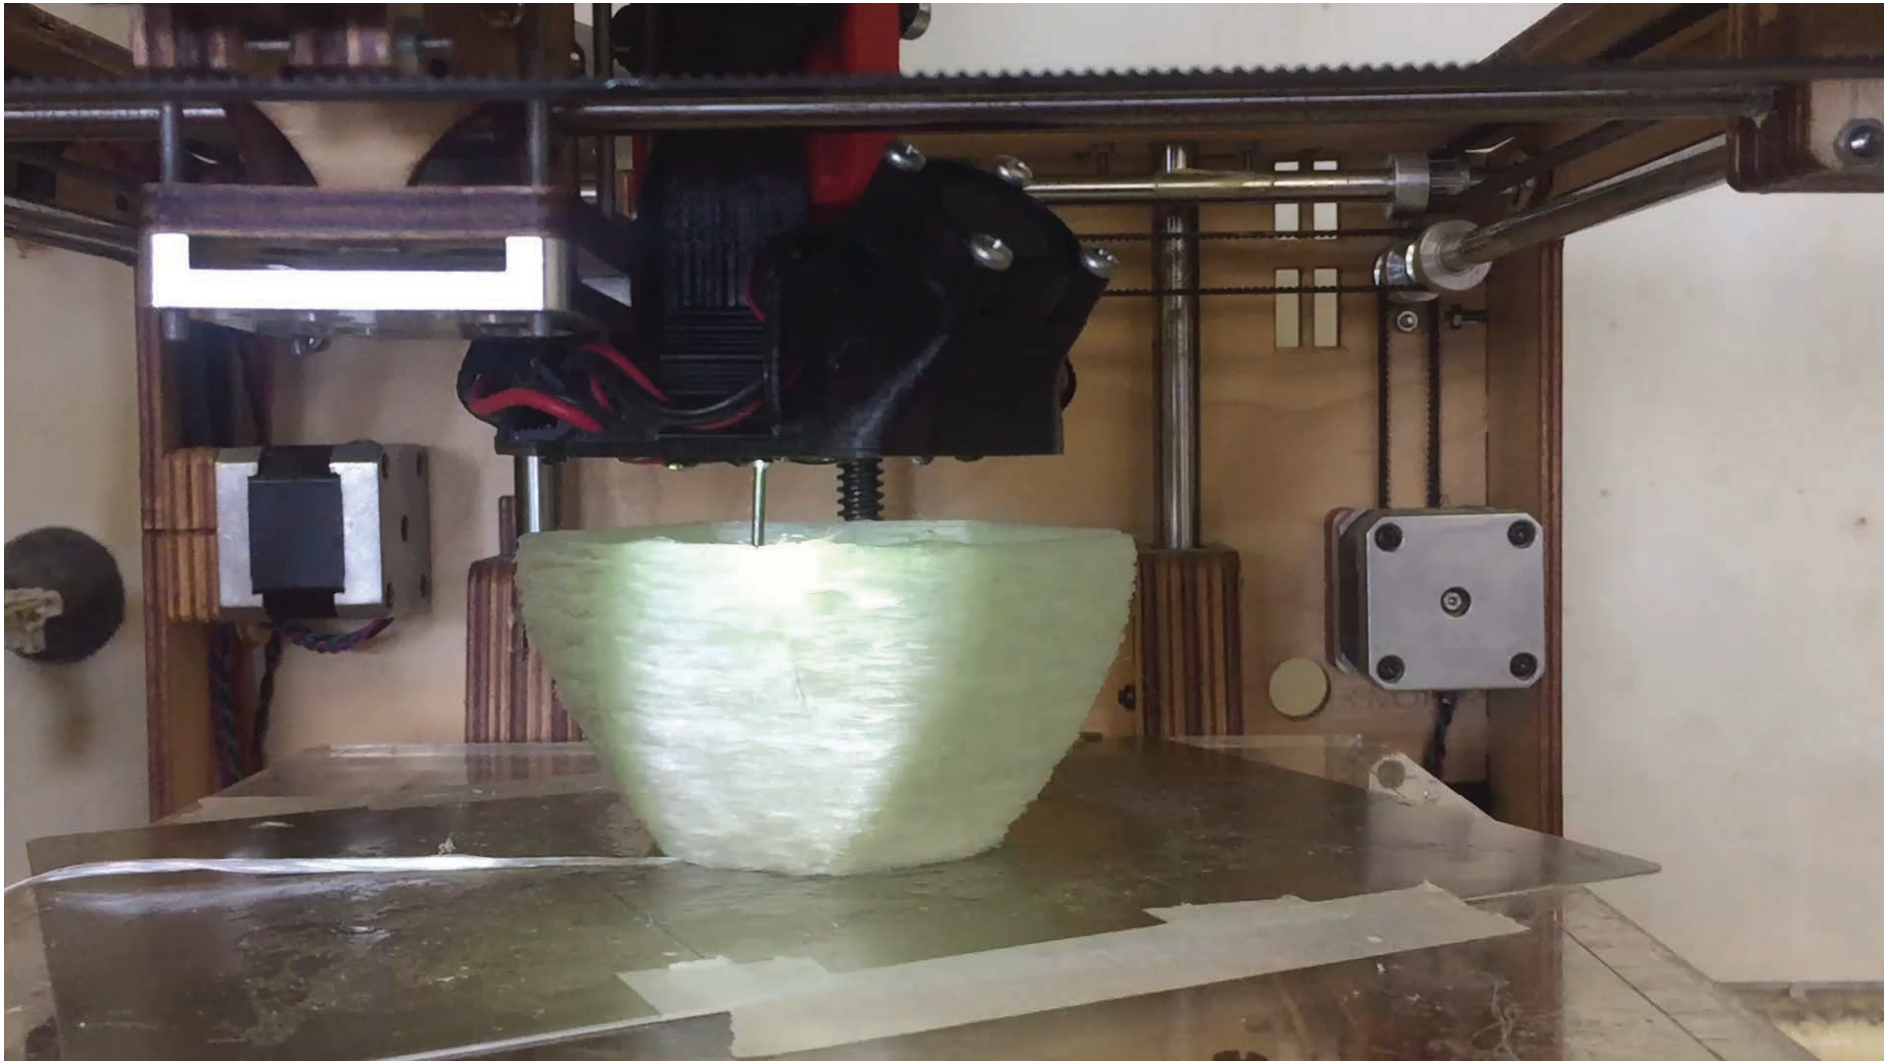
Apparecchiatura e metodo per la stampa tridimensionale di materiali compositi a fibra continua

Domanda numero: 102015000073191

la tecnologia: AM di compositi fibra continua



Il prototipo

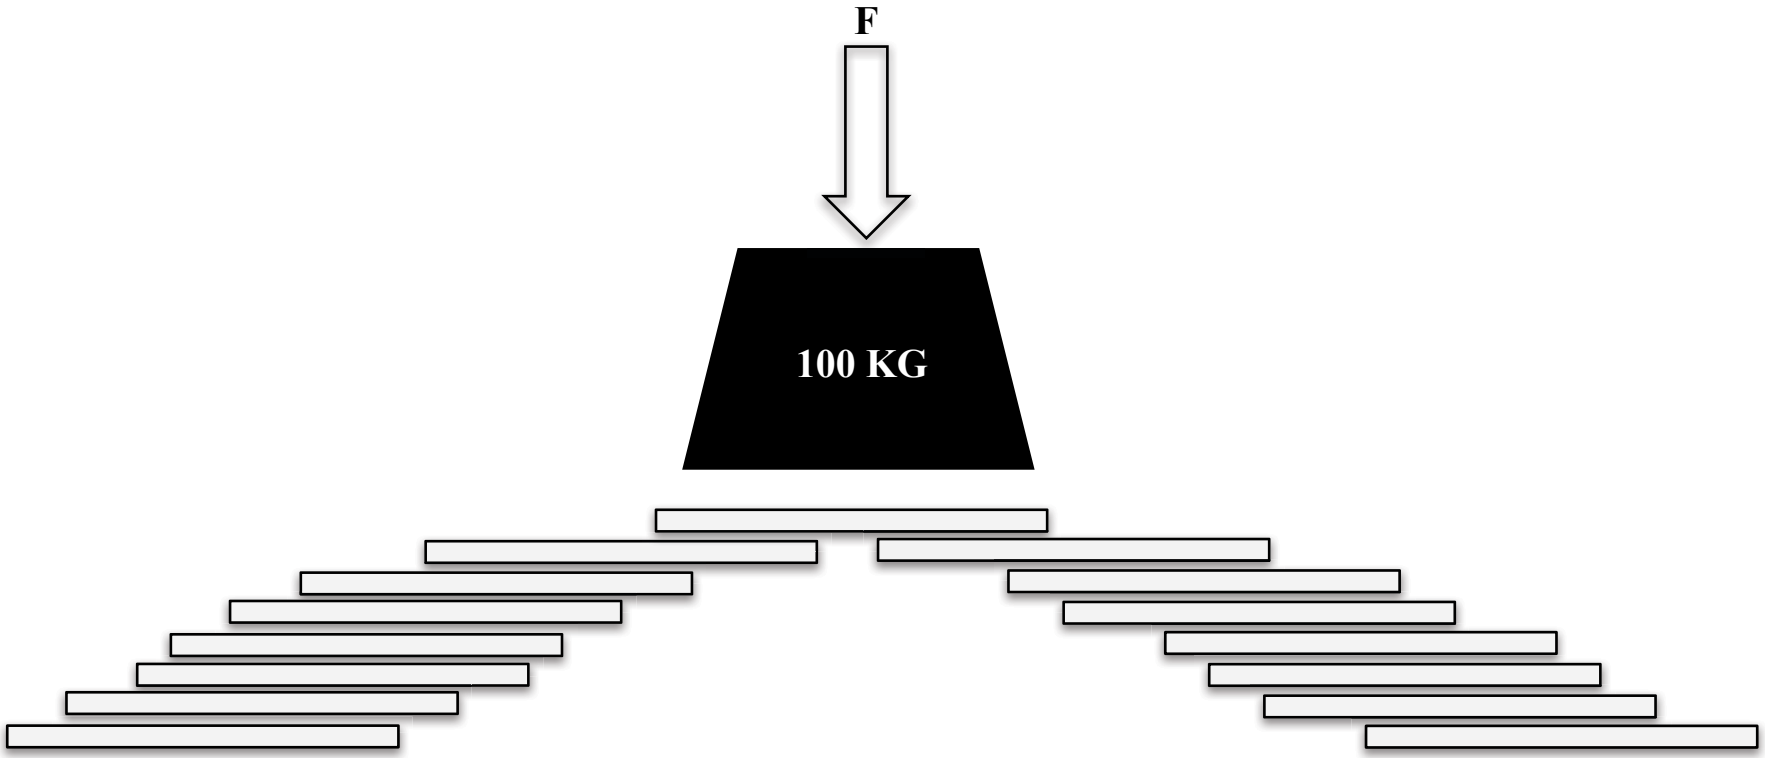


Dalla fibra corta di carbonio…

Alla fibra lunga mista di vetro e carbonio….

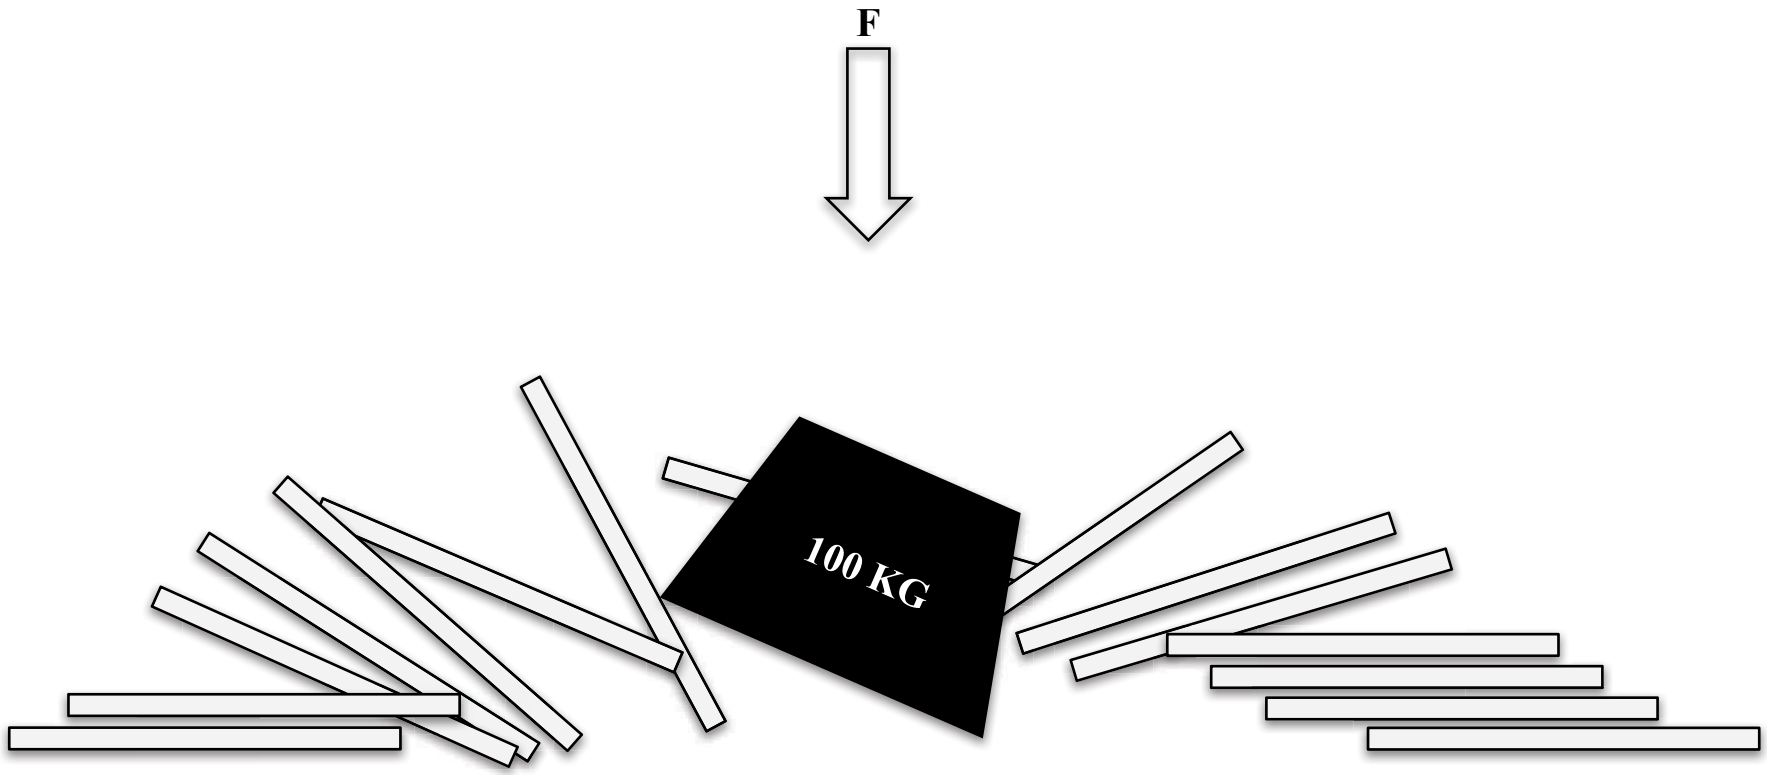
La stampa 3d layer by layer sfrutta un sistema di deposizione di materiale a strati paralleli alla superficie di costruzione.

linear slicing vs smart slicing



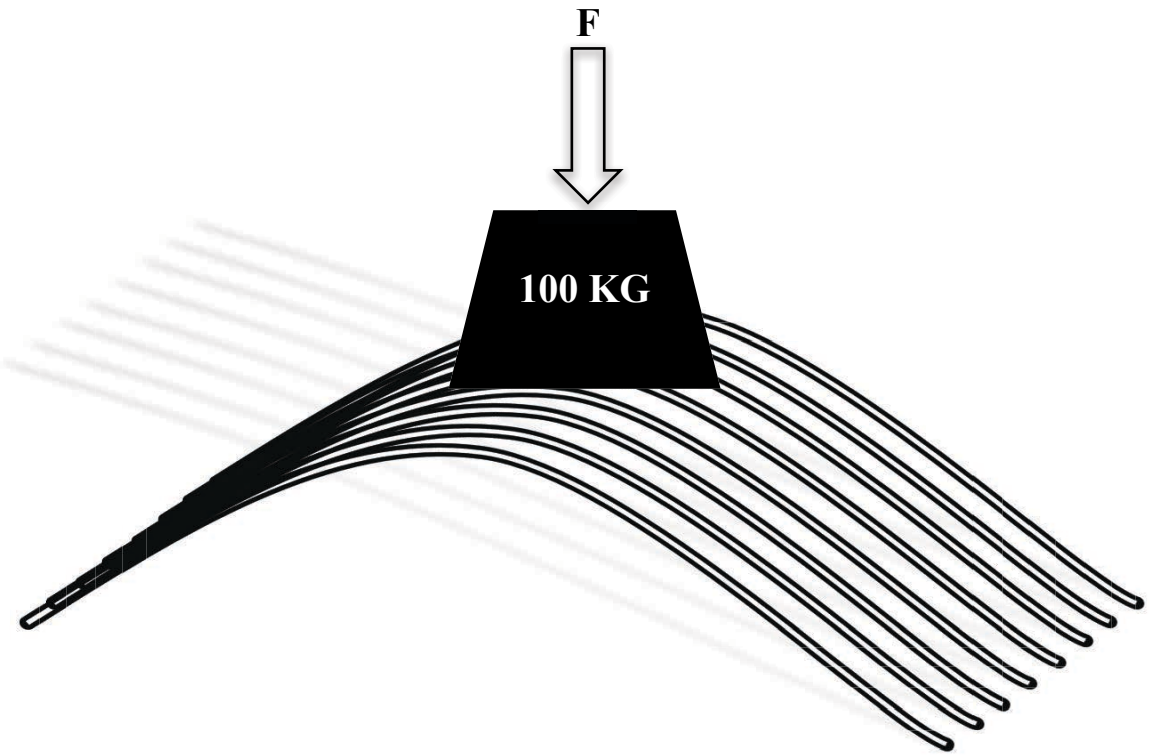
Un sistema di deposizione tradizionale
non è ottimizzato per aumentare le proprietà meccaniche.

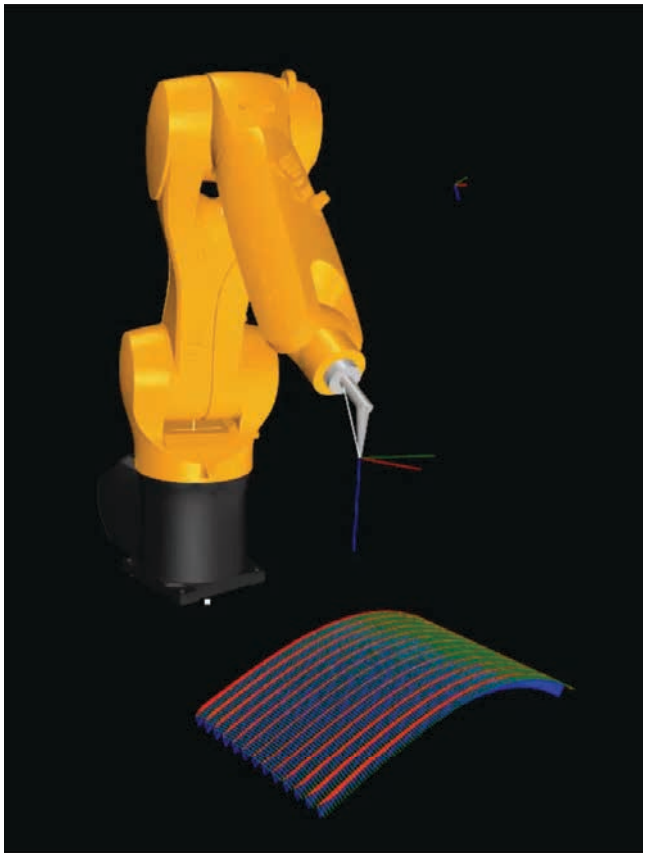
linear slicing



Uno slicing intelligente permette di orientare le fibre in funzione del carico partendo dal FEM.

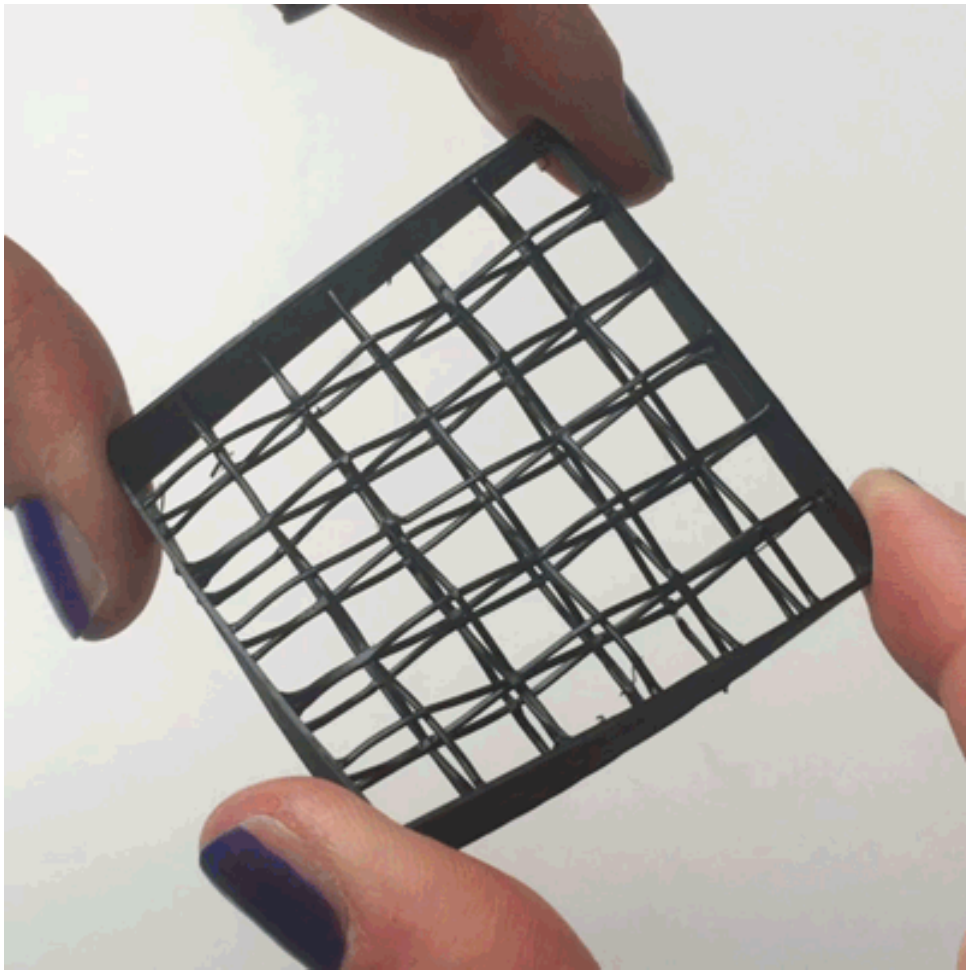
smart slicing

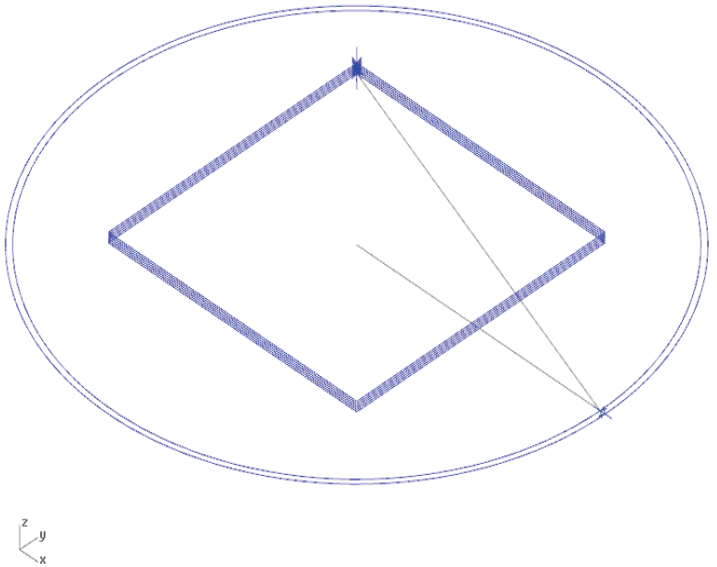




smart slicing

Deposizione superficiale e infil



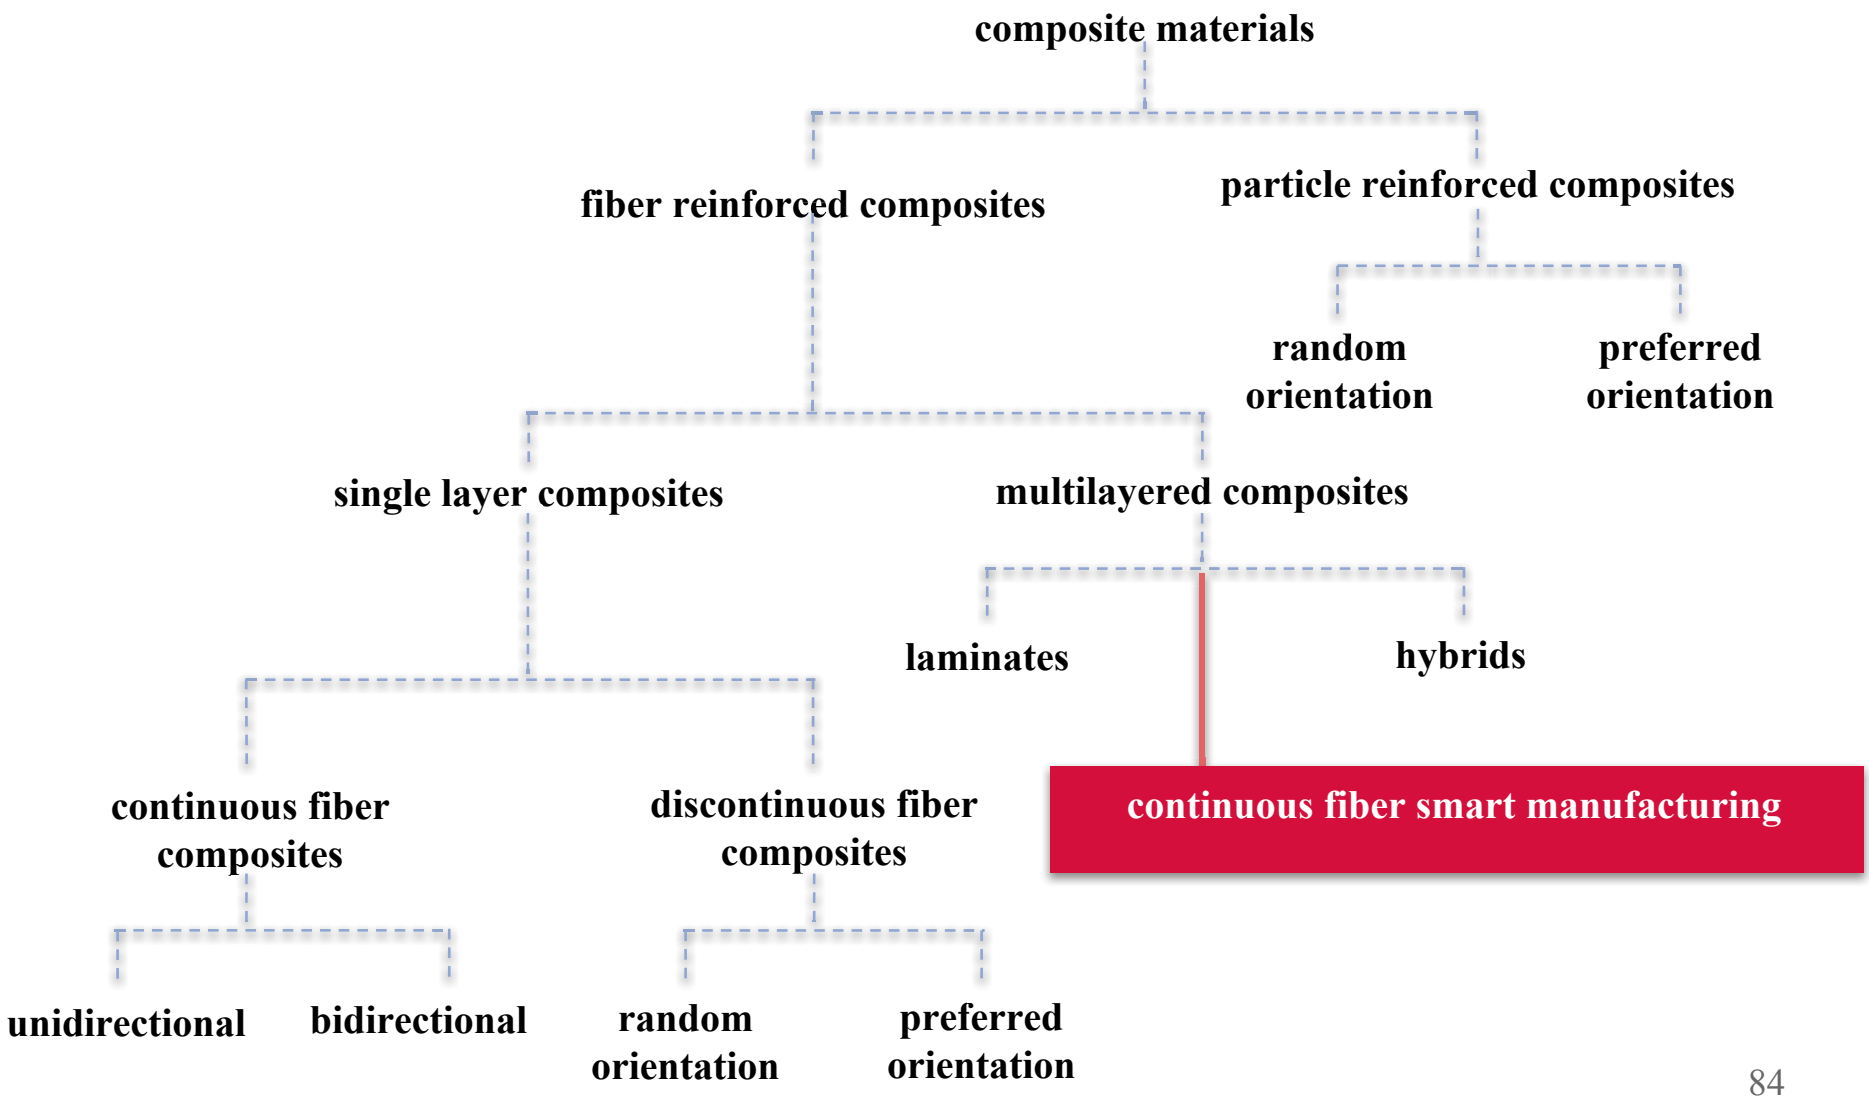


Test fibre di vetro + resina acrilica, peso 88 gr.

smart slicin

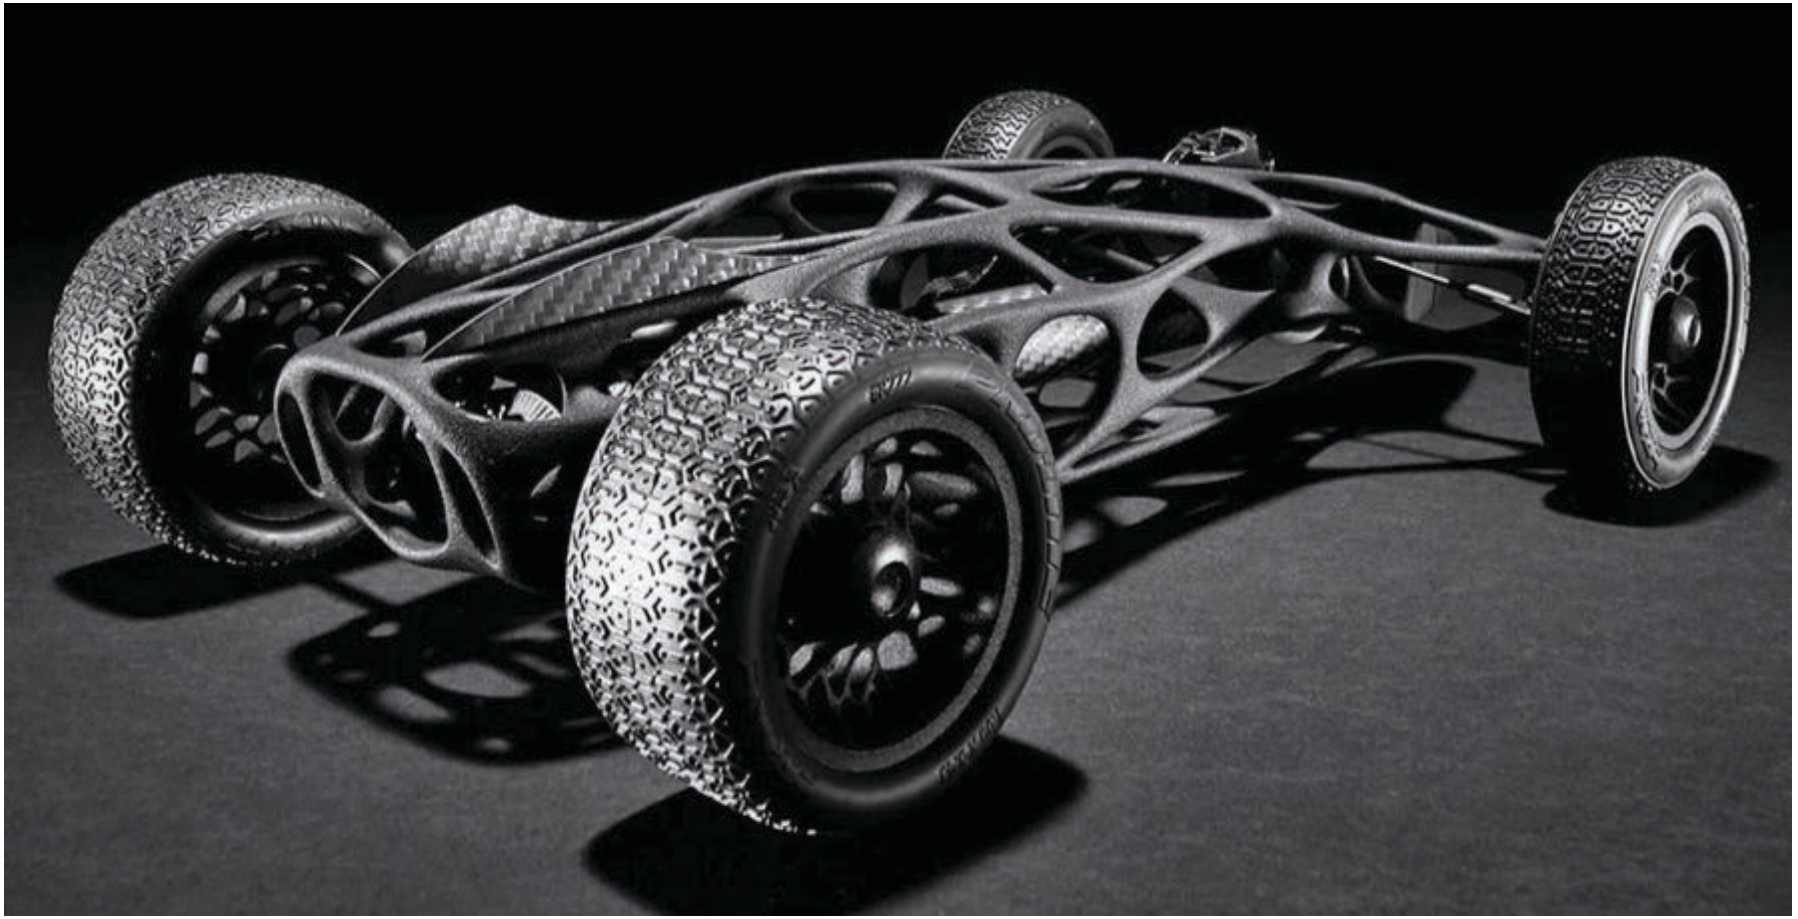
dov’è la novelty?

Come classificare questo processo?



Forme complesse fin ora impossibili da realizzare.

La libertà della lavorazione SENZA STAMPI



Elevate prestazioni derivanti dal utilizzo di materiali performanti con un processo di deposizione controllata.

Prestazioni

La manifattura additiva produce 100 oggetti uguali o cento oggetti differenti con lo stesso costo di impianto.

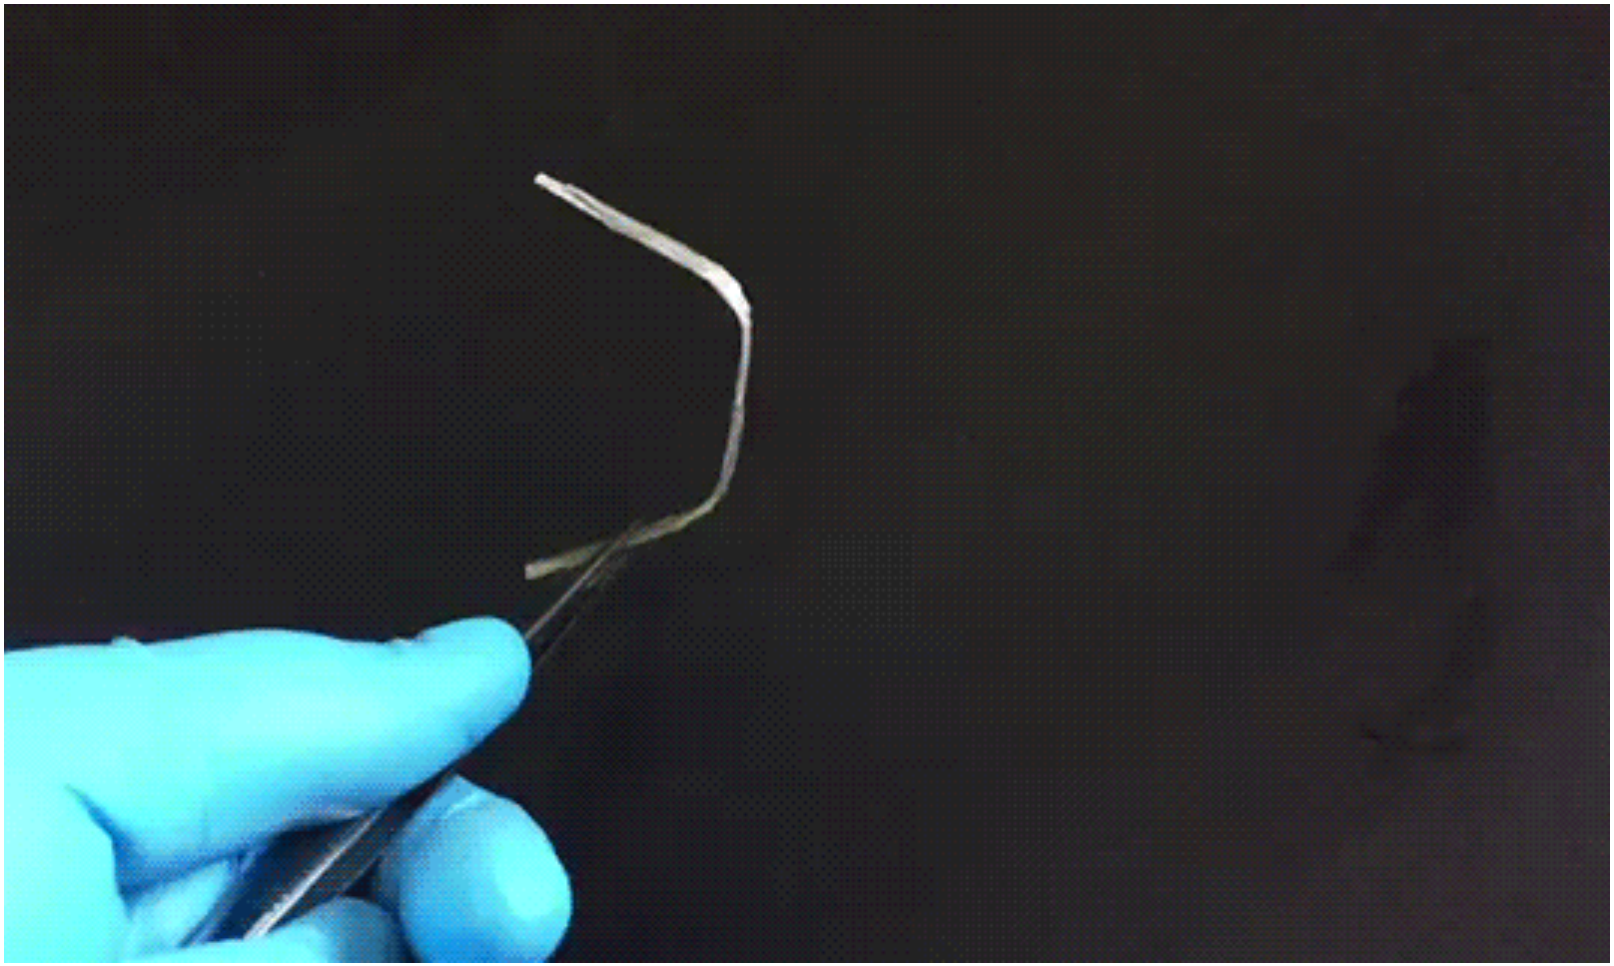
Personalizzazione estrema

Dall'idea al prodotto in breve tempo.

velocità di produzione

Possibilità di creare materiali ibridi e modulare le proprietà delle strutture.

Strutture adattive e materiali intelligenti



l’interesse nel mondo

il mondo della stampa 3d di compositi

The Boston Globe	03/07/2014
www.3ders.org	16/12/2014
Fortune	23/06/2015
www.3ders.org	27/04/2016
TCT Magazine	17/05/2016

CAMX

THE COMPOSITES AND ADVANCED MATERIALS EXPO

2016 CAMX AWARD ENTRANTS

AWARD ANNOUNCEMENT – CAMX GENERAL SESSION

Welcome to
CAMX
THE COMPOSITES AND ADVANCED MATERIALS EXPO

Material and Process Innovation Award

Presented to a material or process that best contributes to efficient manufacturing and product sustainability.

Finalists:

3D Printing of High Temperature Thermoplastic Molds
Oak Ridge National Lab (ORNL)

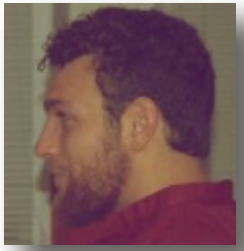
Continuous Fiber Composites Smart Manufacturing
+LAB - Politecnico di Milano

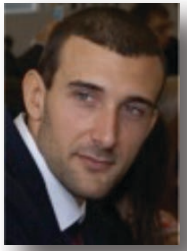
Development of Cocured Integral Wing Interspar Box using VERITy Process
Advanced Composites Division, NAL

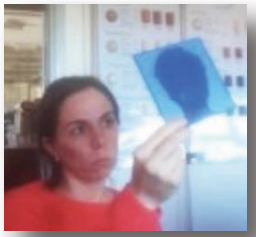
Thermoplastic Resistive Welding Fabric
T Plates Global, LLC.

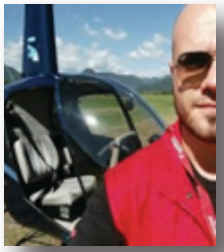
GRAZIE.

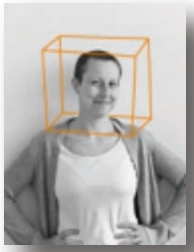
Alla Z, e…

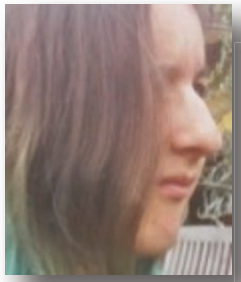


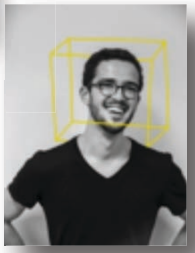


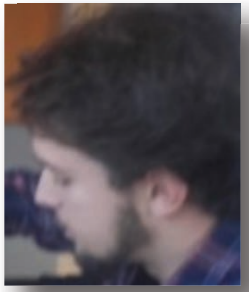


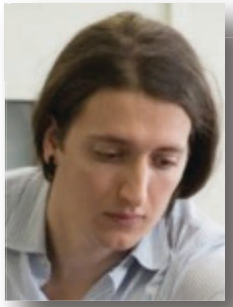


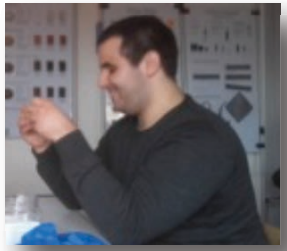


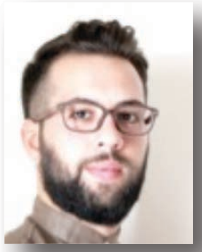


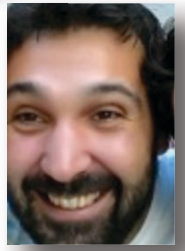


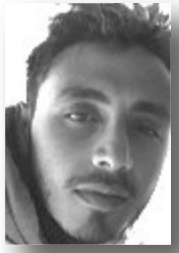


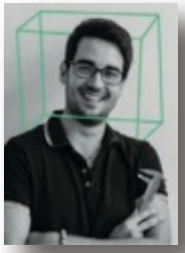


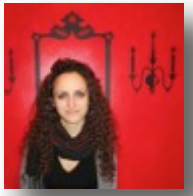












Fare o non fare.
Non esiste provare.
Cosa e perché stampare in 3D

Grazie a voi tutti
per la cortese attenzione.
